Potential Complications

$$E(x,t)$$

Potential Complications

$$E(x,t) \approx P\left(x, t + \frac{1}{2}\right)$$

Potential Complications

$$E(x,t) \approx P\left(x, t + \frac{1}{2}\right)$$
$$\approx 0.5 \times [P(x,t) + P(x,t+1)]$$

What assumptions are we making here?

Longevity Portfolio

- Over 1 million lives
- Gender differentiated
- Full date of birth available

How are dates of birth distributed?

Raw Deaths

The background color of the lexis element reflects the nature of the age interval: A dark gray background indicates a closed, a light gray background indicates an open-ended age interval. The outline color of the lexis element is blue for ages of 130 or less, red otherwise.

U.S. Example

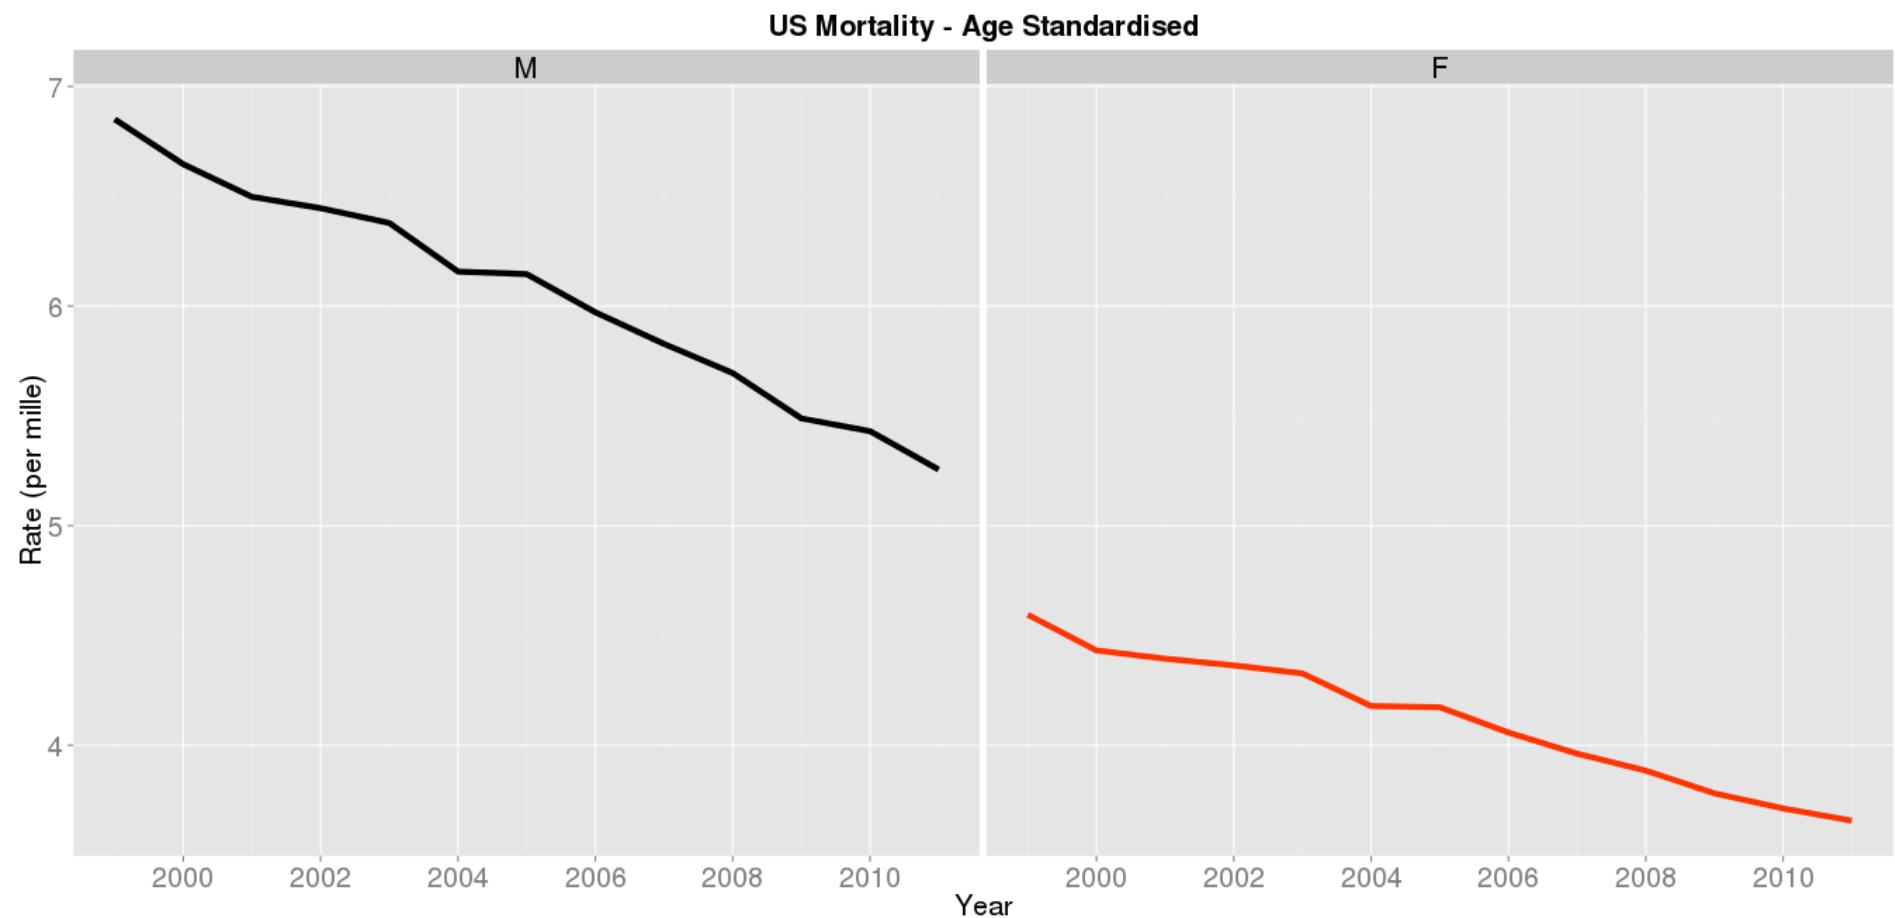

- Consider data from the Centers for Disease Control and Prevention (CDC)
- Gender differentiated
- Individual Age
- Calendar Years 1999 – 2011
- ... also includes ethnic origin

U.S. Example

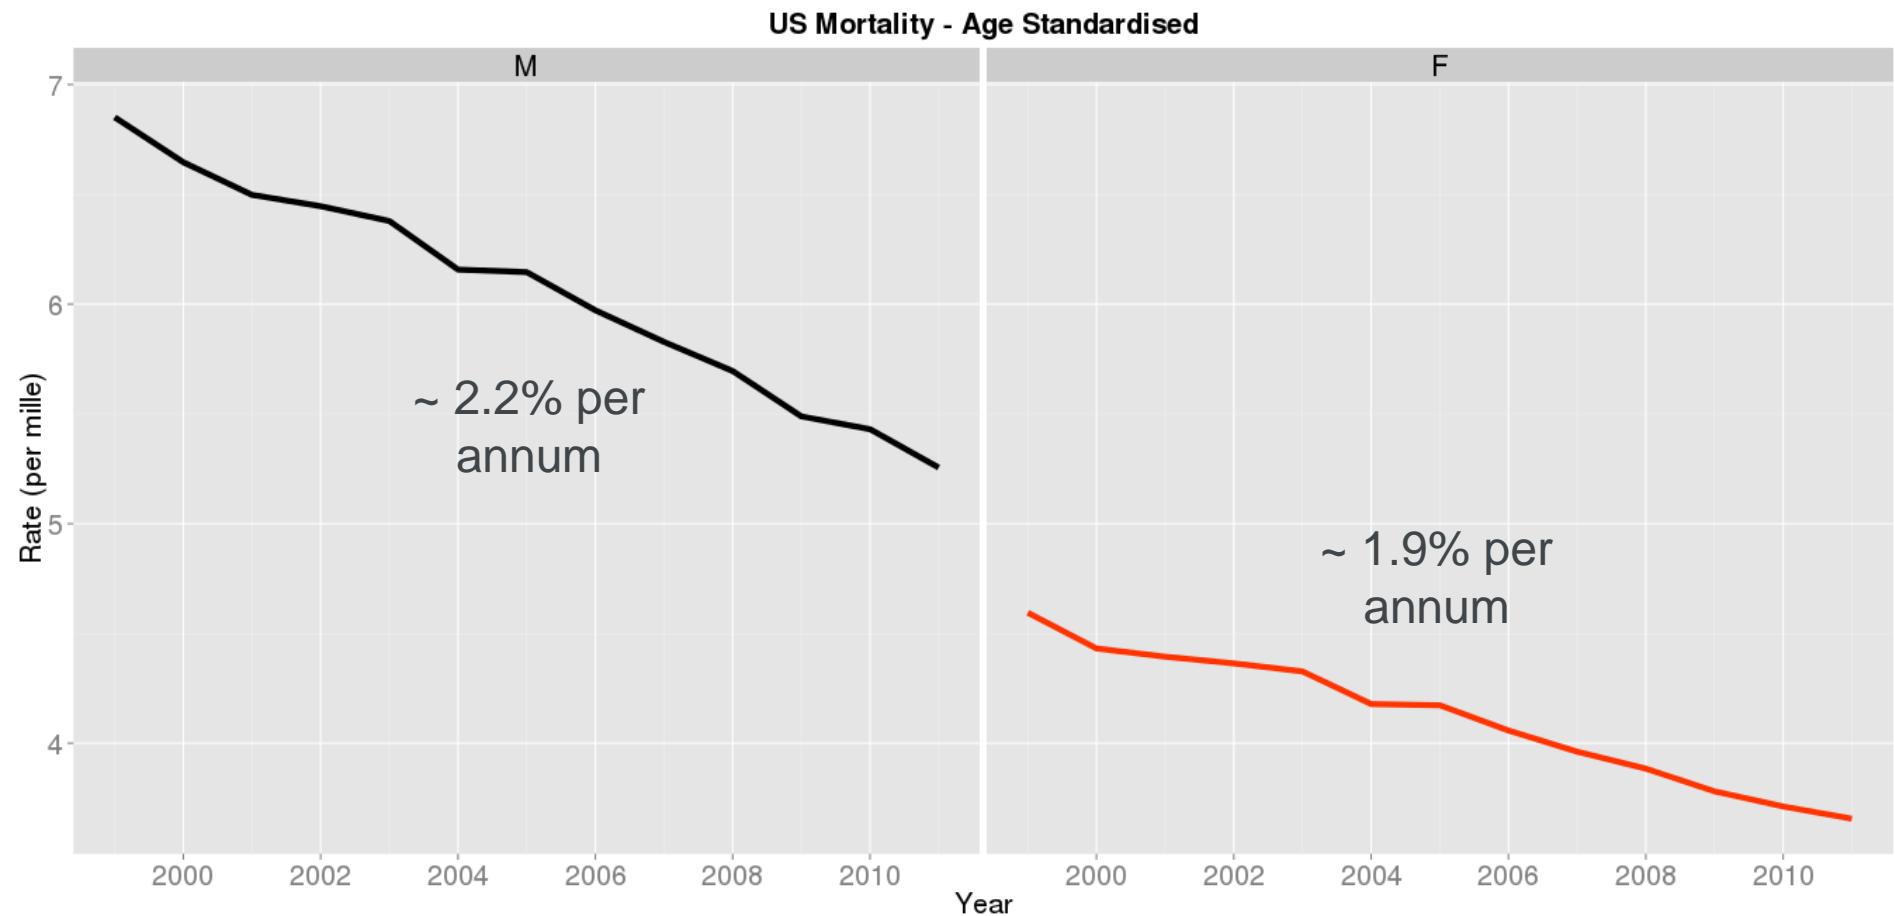

Source: CDC - Accessed Oct 2014

2 Populations

Cat Land
No mortality improvement

© Fotolia.com

2 Populations

Cat Land
No mortality improvement

Dog Land
No mortality improvement

2 Populations

Cat Land
No mortality improvement

Dog Land
No mortality improvement
q(x) is 900% of that in Cat Land

Example 1

- Residents of Dog Land migrate to Cat Land
- 1% population growth
 - Per annum
 - Over 4 years
 - Over the age range 30 – 50
- Dogs don't trend to local mortality experience

Example 1

Trailing edge cohort effect

Improvements by Calendar Year

Improvements by Age

Example 2

- Residents of Dog Land migrate to Cat Land
- 1% population growth
 - Per annum
 - Over 4 years
 - Over the age range 30 – 50
- Dogs take on cat characteristics over 10 years

Low Immigrant Mortality or Data Artifact?

- Low mortality for most immigrant groups compared to natives in the host country¹
- Often attributed to beneficial health selection processes
- Could it be data artifacts?
- Explored in recent paper by Wallace and Kulu²

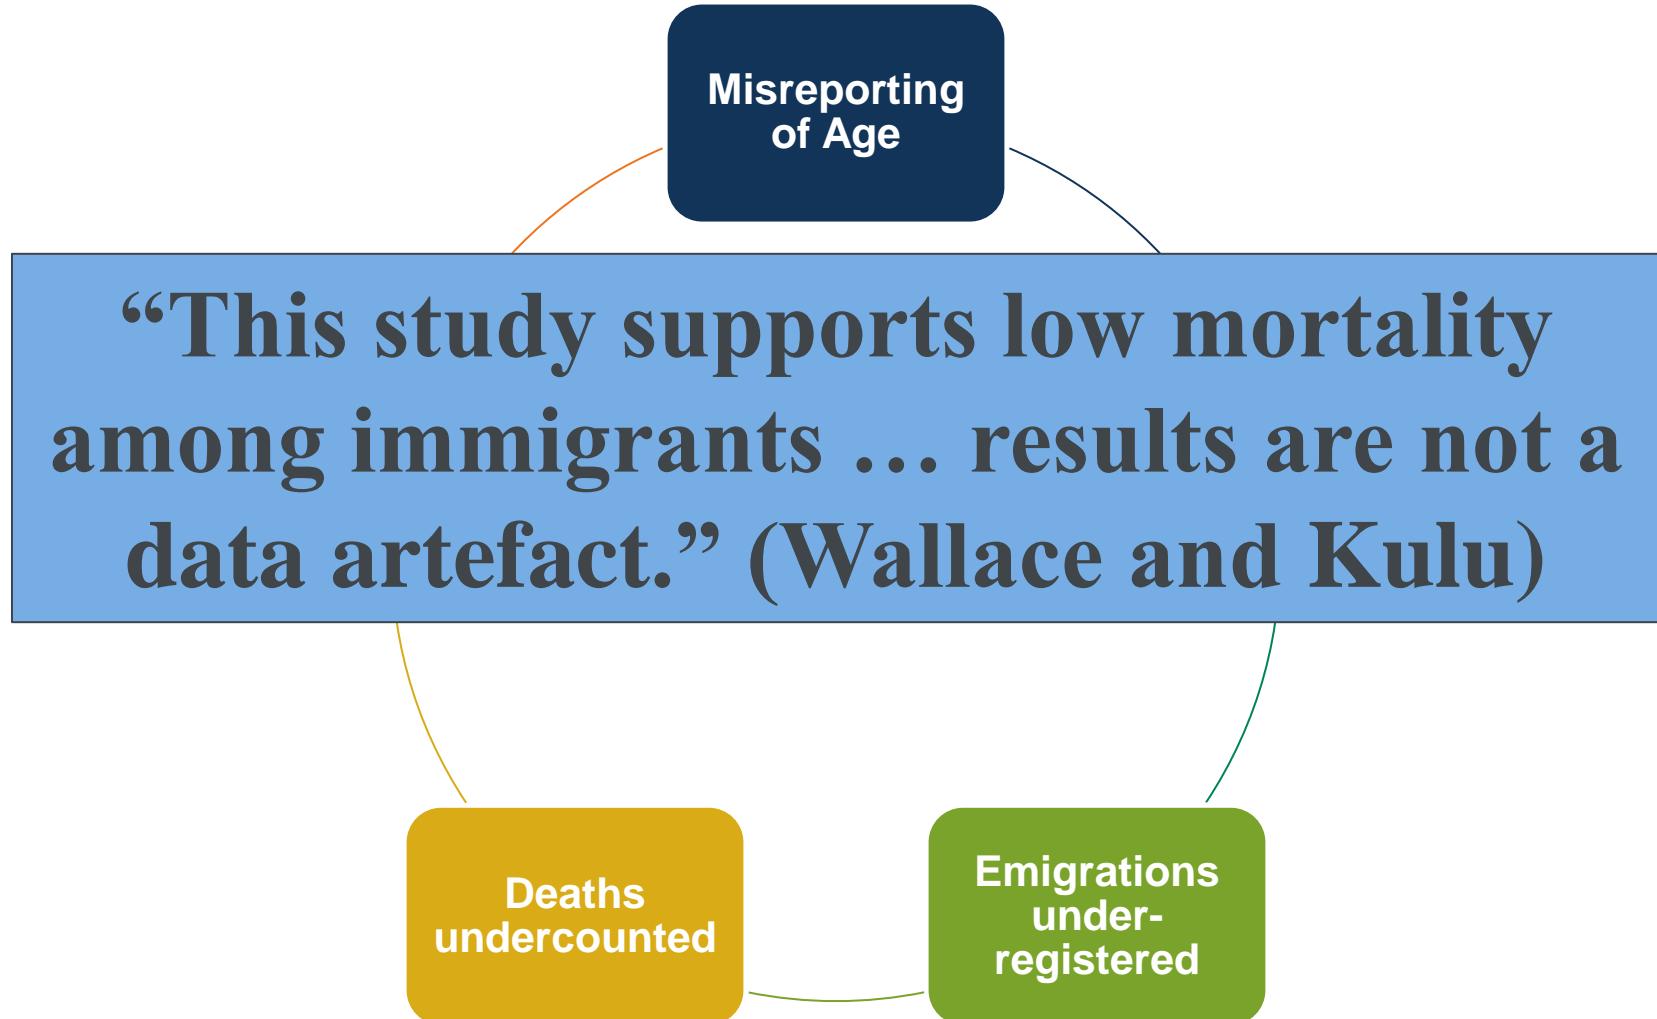

¹NZ - Hajat et al., 2010, U.S. - Abraido-Lanza et al., 1999; Palloni and Arias, 2004

²Wallace and Kulu, 2014

Seasonality – weekly death registrations

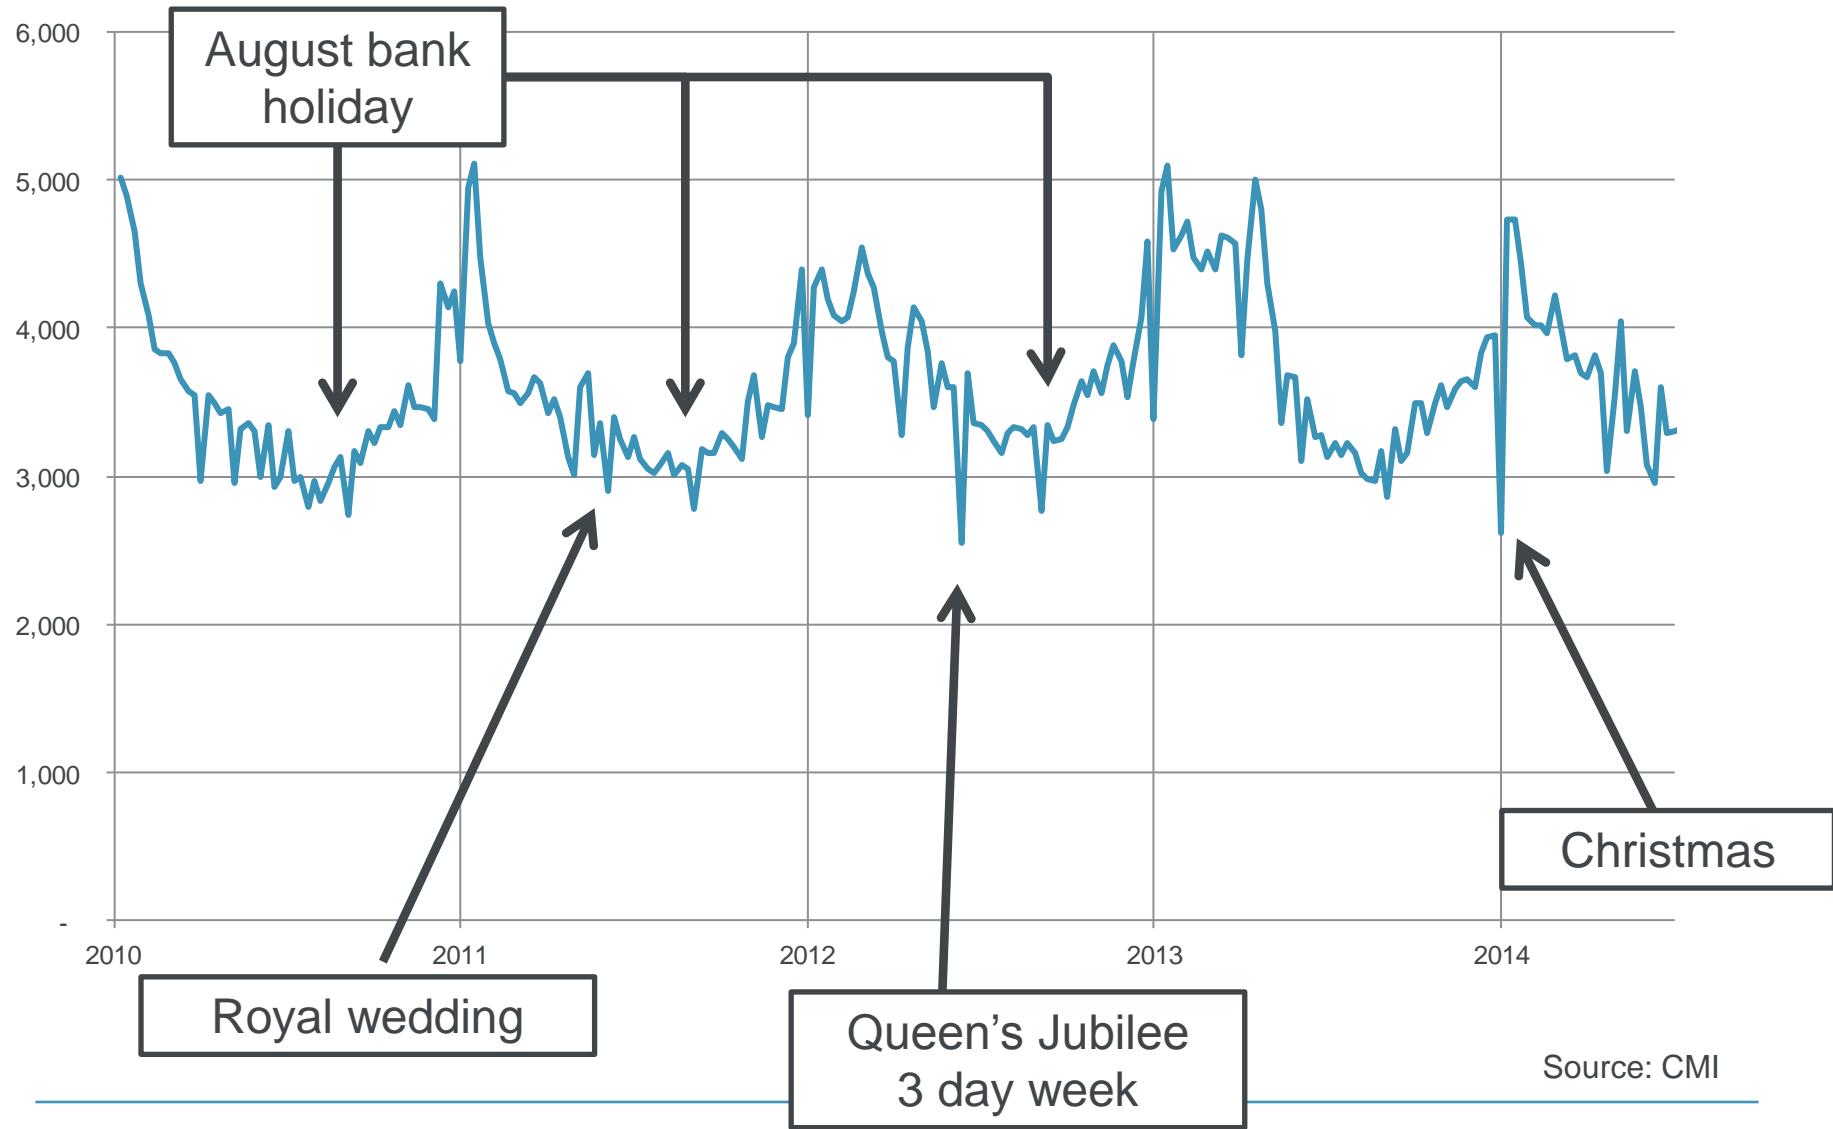

Source: ONS

Seasonality – Age 85+ (CMI)

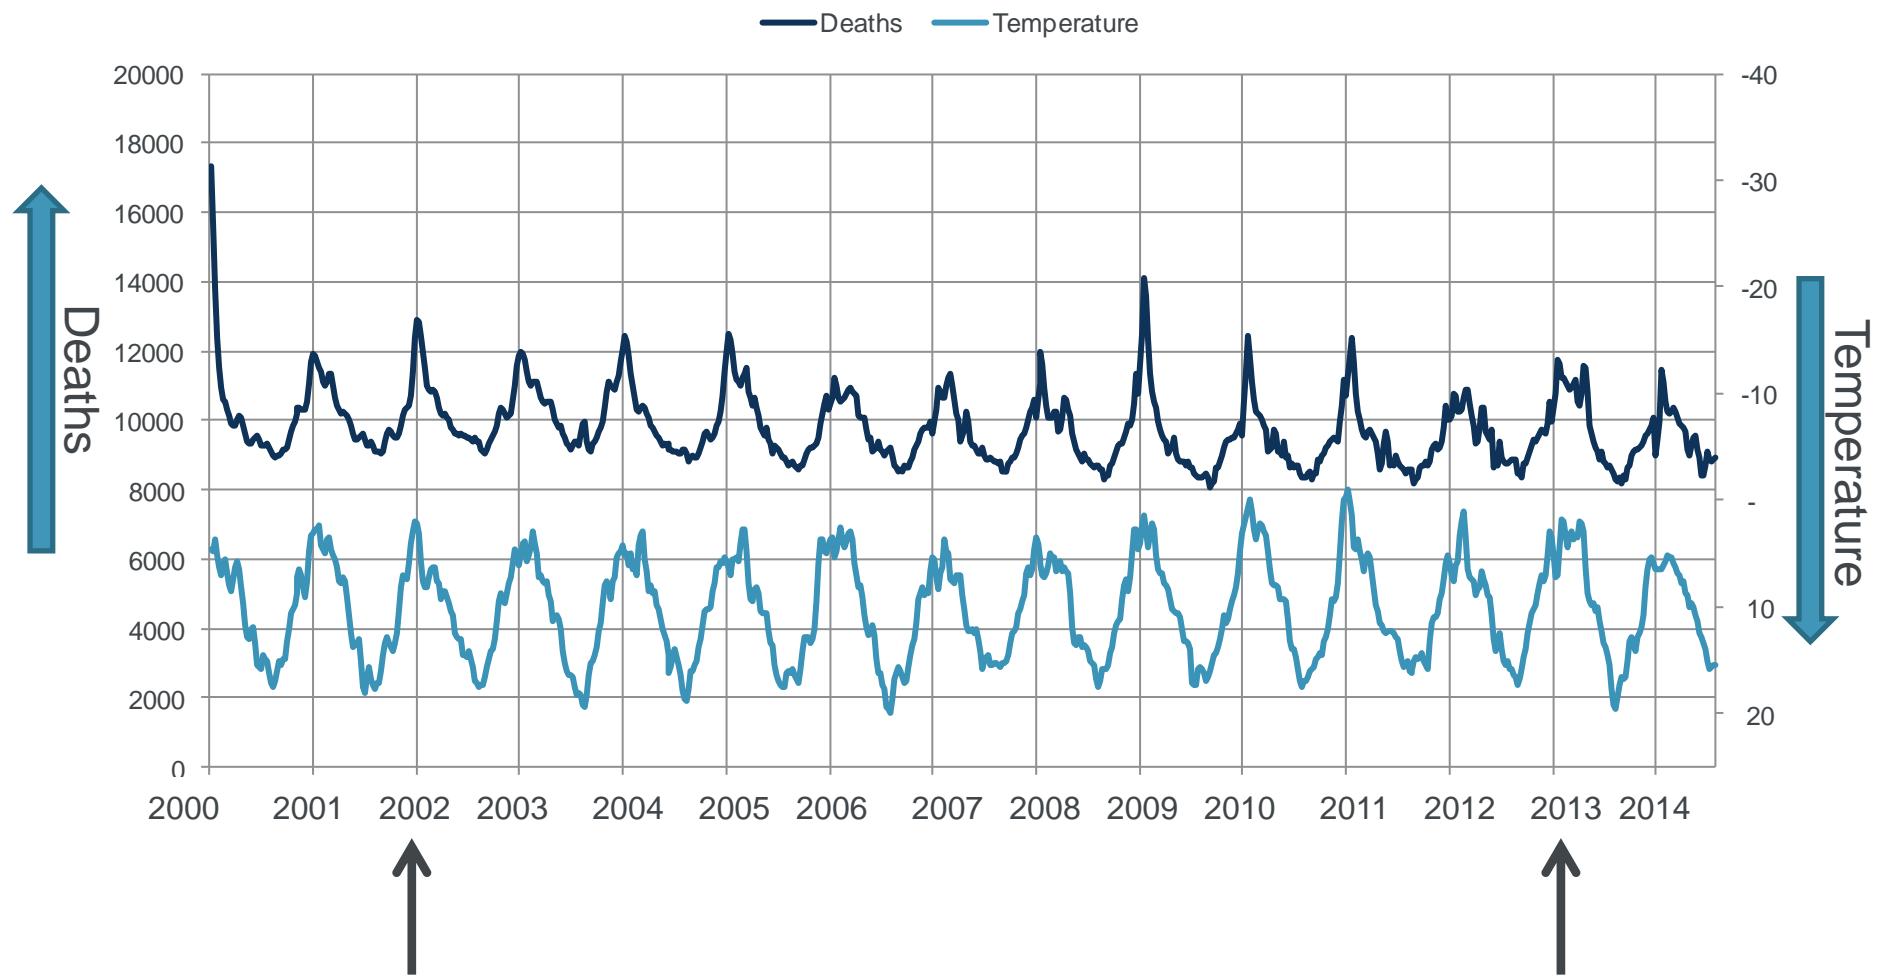

Source: CMI

Seasonality – bank holiday effect

Seasonality – weekly death registrations

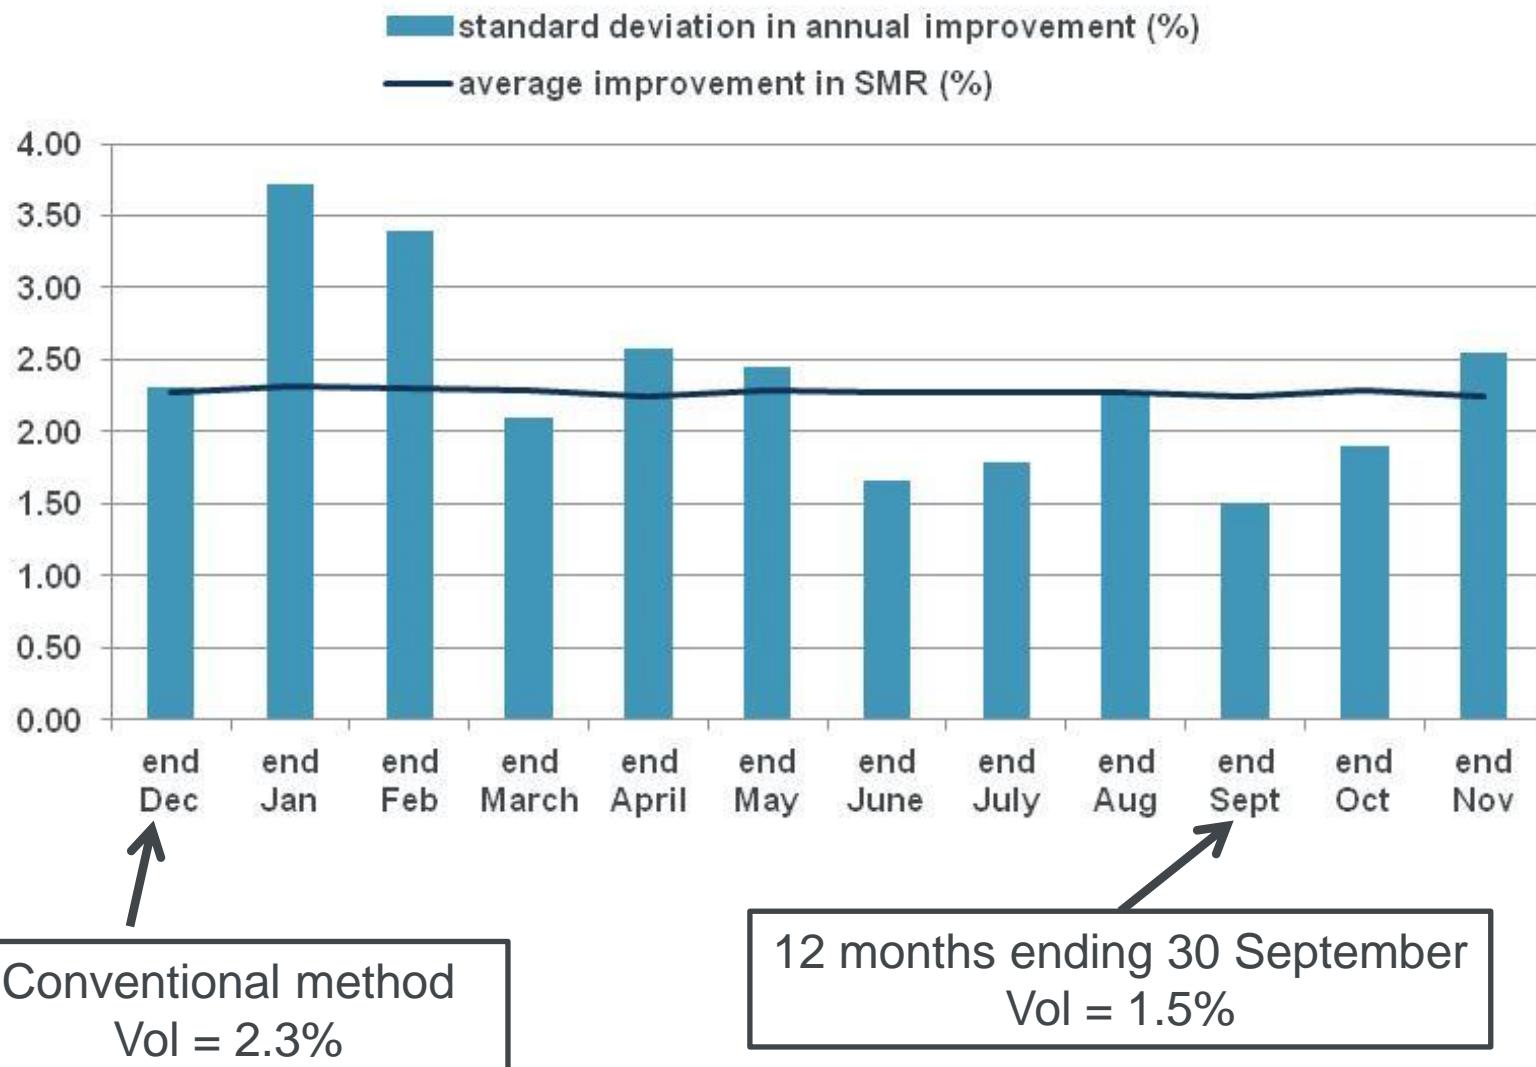

Seasonality – conventional approach

- Seasonality normally ignored
- Deaths by calendar year
- Mid-year population estimates

Interval	Average improvement in mortality	Standard deviation in annual improvement
12 months ending December	2.3%	2.3%

Ten year time series

Seasonality – choice of interval

Source: ONS data & own calculations

Seasonality – choice of interval

Interval	Average improvement	Standard deviation in annual improvement
12 months ending December	2.3%	2.3%
12 months ending September	2.3%	1.5%

- Calendar year interval overstates underlying volatility
- Stochastic models - Lee Carter, CBD, RH etc

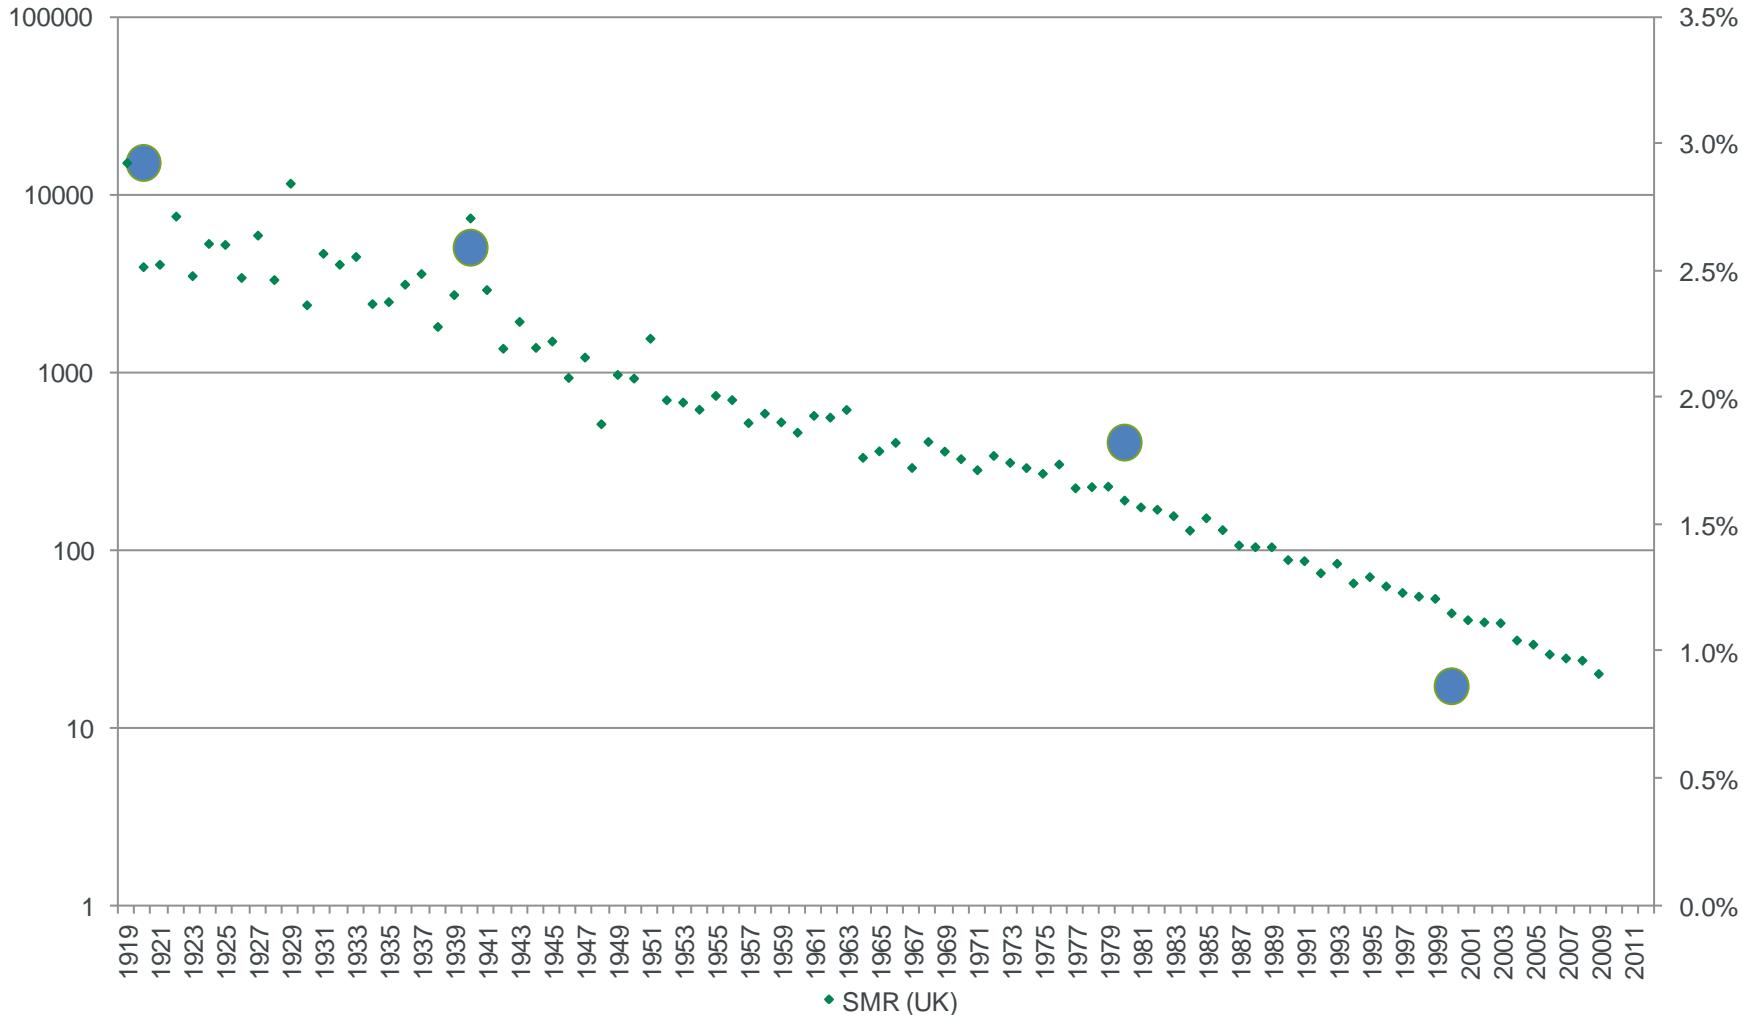

Source: ONS data & own calculations
