## Is there a future for Embedded Value in a post Solvency II world?

- What do you think?
- What should we consider:
  - Who are the relevant stakeholders?
  - What do they want to see?
  - Does Solvency II provide this?
  - How much faith will there be in Solvency II metrics?
  - Can Embedded Value provide these needs any better?
  - Is EV any more trusted?
  - How many methods of reporting are really needed?
  - What are the practicalities of running both?
