The Actuarial Profession making financial sense of the future

Our Changing Future Open Forum Joshua Corrigan

A Holistic Framework for Life Cycle Financial Planning

15 April 2010

Current FSA Illustration Requirements

- FSA illustration requirements set out in Conduct of Business Sourcebook (COBS13)
- Deterministic projections are a MUST, stochastic projections are OPTIONAL
- Deterministic nominal returns that must be used are:

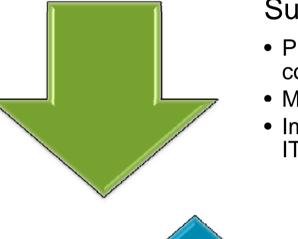

Class of Bus	siness	Low	Medium	High
Tax-exempt p	ensions, annuities	5%	7%	9%
All other		4%	6%	8%
Not risk sensitive	Inconsistent risk premia	Not market sensitive	Focus on costs	Can't illustrat path dependencie

Current Financial Planning Framework

- Based largely on regulatory minimum illustration standards
- Wealth accumulation mindset
- Limited product illustrations, comparisons and value assessment
 - Consider 5 alternative at-retirement product strategies
 - Which one is best / most optimal / most appropriate / constitutes "value"???

Strategy	A	В	С	D	E
Product	Income Drawdown	GMWB for life	Indexed Annuity	Fixed Annuity	Drawdown + Longevity Annuity
Benefit Level	5.5%	5.5%	5.7%	7.7%	5.2%
Cost	2%	2%+1%	None (explicit)	None (explicit)	2%
Death Benefit	Yes	Yes	No	No	Yes
Flexibility	High	High	Low	Low	High
Income Upside	Yes	Yes (ratchet)	Yes	No	Yes

Catalysts for Change

Supply Drivers (Providers)

- Product solutions are evolving to meet consumer demands
- Move towards fee-for-advice models
- Improvements in stochastic modelling and IT infrastructure

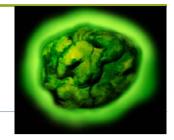

Demand Drivers (Consumers)

- Responsibility for ensuring income security has been left to retirees
- Retirement savings are inadequate to meet post retirement objectives
- Increased appreciation for retirement related risks

Elements of a New Holistic Framework

1. Total wealth management	Human and all sources of financial capital Human capital profile and it's yield are fundamental inputs Interaction with investment / product strategy
2. Consumption / income based goals	Income should be the primary focus for most people Even for accumulation, wealth is only a means to an end Bequest motive a factor for very HNW
3. Explicit risk assessment and management	Risk identification over various life stages Choice of investment and product strategy to mitigate risks
4. Objective holistic stochastic analysis	Consistent objective outcome illustrations Including guarantees and path-dependent benefits (e.g. Ratchets) Clear presentation / communication of outcomes and risks
5. Consideration of behavioural biases	Asymetric risk preferences Framing of alternative choices is critical Role of advisor / distributor is critical

Human Capital Value of a Person as an Economic Unit

Wage income represents the yield on HC

$$\sum_{t=1}^{n} \frac{\text{Current wage} \times (1 - \text{tax rate}) \times (1 + \text{wage growth})^{t}}{(1 + \text{discount rate})^{t}}$$

	PERSON A	PERSON B	PERSON C
PERSON	25 YO GRADUATE	40 YO EXECUTIVE	40 YO TEACHER
CURRENT WAGE	50,000	150,000	50,000
WAGE GROWTH	5%	7.5%	5%
TAX RATE	40%	45%	40%
WORKING YEARS (N)	40	25	25
DISCOUNT RATE	9.00%	11.00%	6.00%
HUMAN CAPITAL	634,269	1,441,948	670,929

Why is Human Capital Useful?

- Framework for making personal decisions e.g. cost benefit analysis of education and employment
- Determines demand for life insurance protection

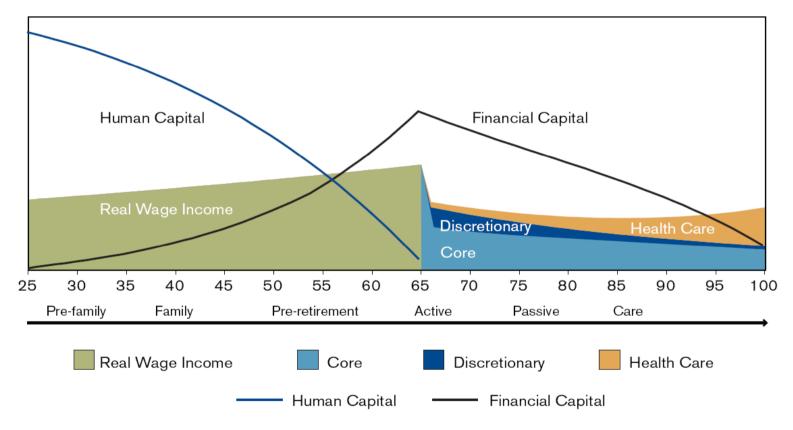

- Key driver of future lifetime savings, wealth and consumption
- Influences asset allocation strategy through correlation of human and financial capital

		EMPLOYMENT INDUSTRY							
		FINANCIAL	п	HEALTH	TECHNOLOGY	AVIATION			
INVESTMENT ALLOCATION	FINANCIAL SERVICES	15%	5%	9%	8%	8%			
VILOC	т	10%	21%	9%	13%	12%			
ENT A	HEALTH	1%	2%	3%	2%	2%			
ESTM	TECHNOLOGY	11%	11%	8%	17%	10%			
INNI	AVIATION	<1%	<1%	<1%	<1%	7%			

Source: Gerhard (2009)

Holistic Lifecycle Framework

The central feature is the transition of human capital into financial capital and thus into future income to meet future consumption needs

Financial capital is only a mechanism to transfer income and consumption to later periods

Consumption Based Goals

• Asset purchases

Children education

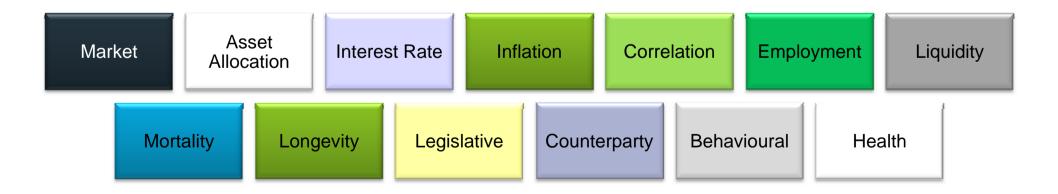

- Retirement income to meet:
 - Core expenses
 - Spending the kids' inheritance
 - Medical needs

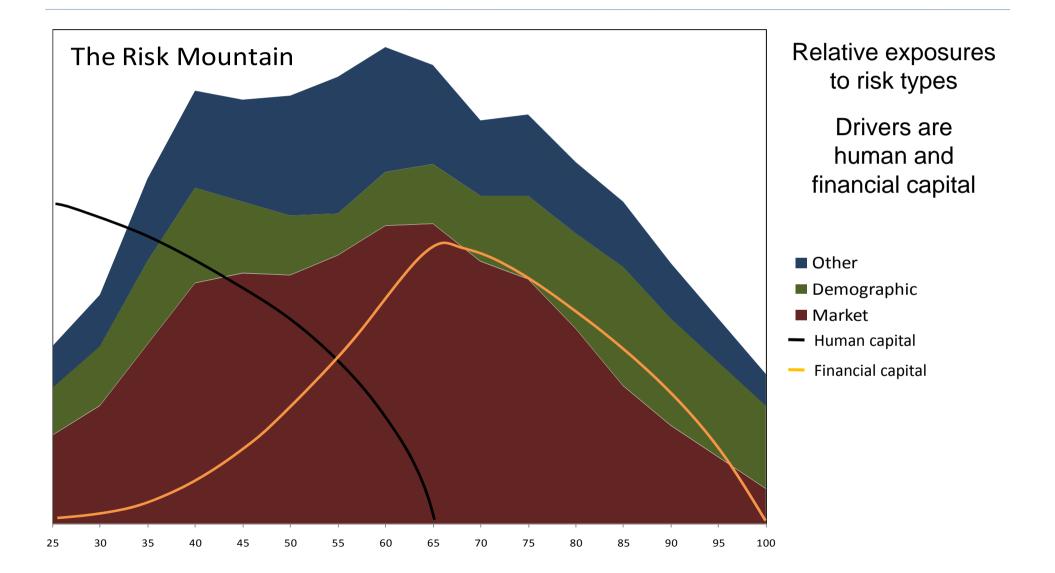

Wealth → Income Return → Risk

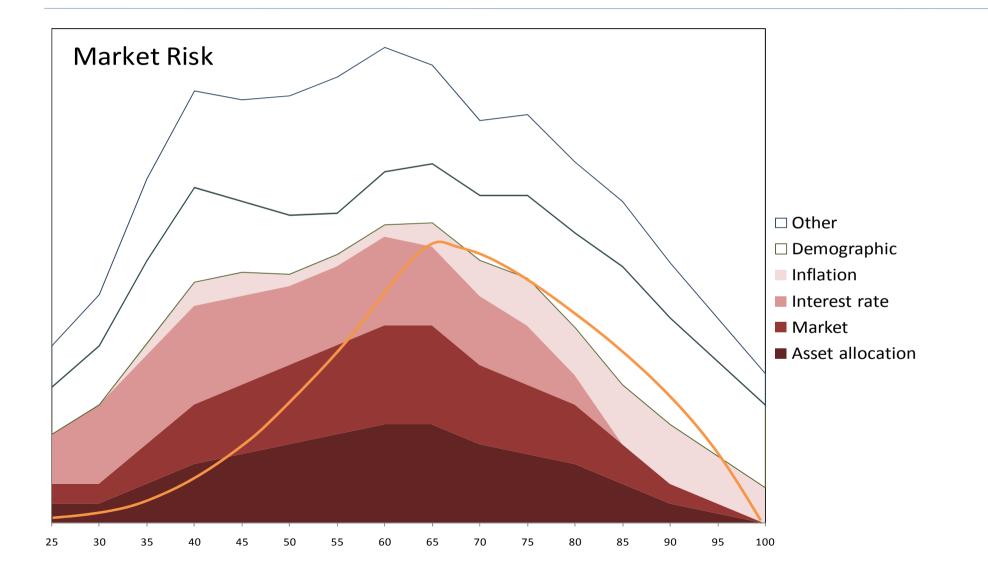

- Primary focus is on income, not financial wealth
 - Wealth is simply a means to an end \rightarrow to deliver future income
 - Income is used to satisfy needs and wants
- Risks need to be explicitly identified, understood, assessed and managed in order to realise long term goals

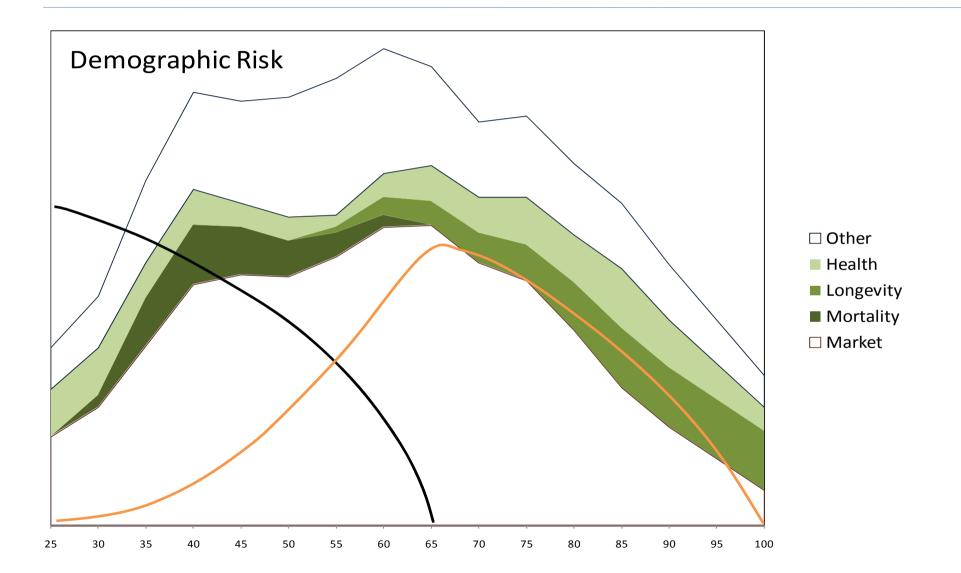

Lifecycle Risk Assessment

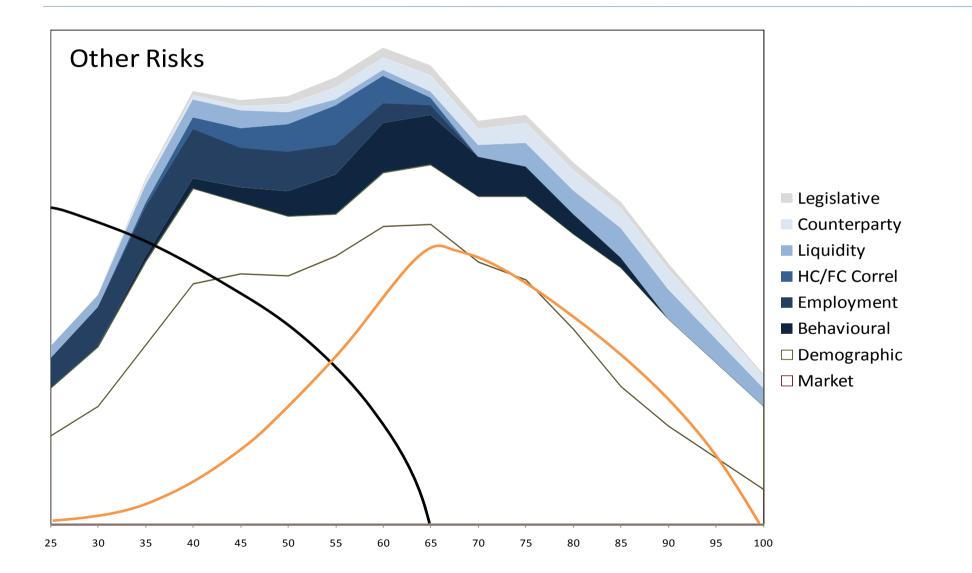

Market Risk: Function of Financial Capital

Demographic Risk: Function of FC and HC

Other risks: function of FC and HC

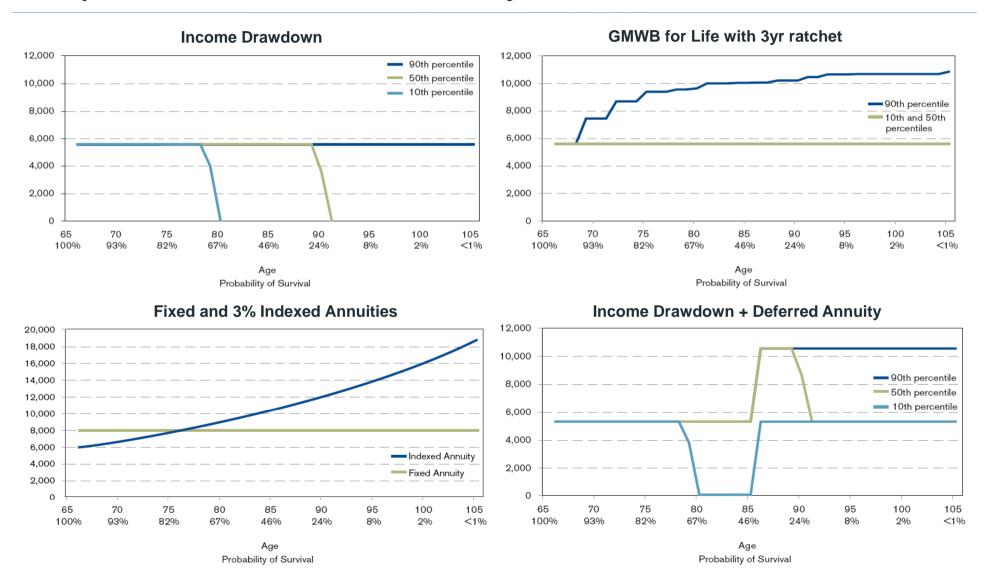

Impact on Residual Risks

Strategy	А	В	С	D	E			
Product	Income Drawdown	GMWB for life	Indexed Fixed Annuity Annuity		Drawdown + Longevity Annuity			
Benefit Level	5.5%	5.5%	5.7%	7.7%	5.2%			
Benefit Increase	None	3 yr ratchet	3%	0%	N/a			
Flexibility	High	High	High Low Lo		High			
Residual Risk Assessment (post-purchase)								
Income	High	Low	Low None		Moderate			
Market	High	Low	None None		Moderate			
Interest rate	Moderate	Low	None	None None				
Inflation	Moderate	Moderate	Low	Low High				
Liquidity	None	None	High High		Low			
Mortality	None	None	High	High	Low			
Longevity	High	None	None	None	Low			
Health	Low	Low	High	High	Moderate			

Objective Consistent Outcomes Analysis

Comparison of Income Distributions by Product

Value Assessment

Risk Aversion and Behavioural Biases

- Whilst outcomes are objectively assessed, value is subjective
- Although most people are risk adverse, behavioural biases play an important role in the utility maximisation decision making process

Availability Heuristic

Incorrect assignment of outcome probabilities based upon what individual perceives

Conjunction Fallacy

An event (e.g. death) can be easily perceived to happen in multiple ways → over-weighted

> Myopia Lack of foresight or interest

Mental

Accounting

incorrect framing of the decision, usually too narrow

Inertia

To maintain current positions and choose default options

Cumulative Prospect Theory

Subjective weights assigned to outcomes relative to a reference point

Ambiguity Aversion

More adverse to uncertain gambles than to risky gambles (known probs)

Pride and Prejudice

Not wanting to admit failure e.g. sell bad assets as to avoid crystallising a loss

16

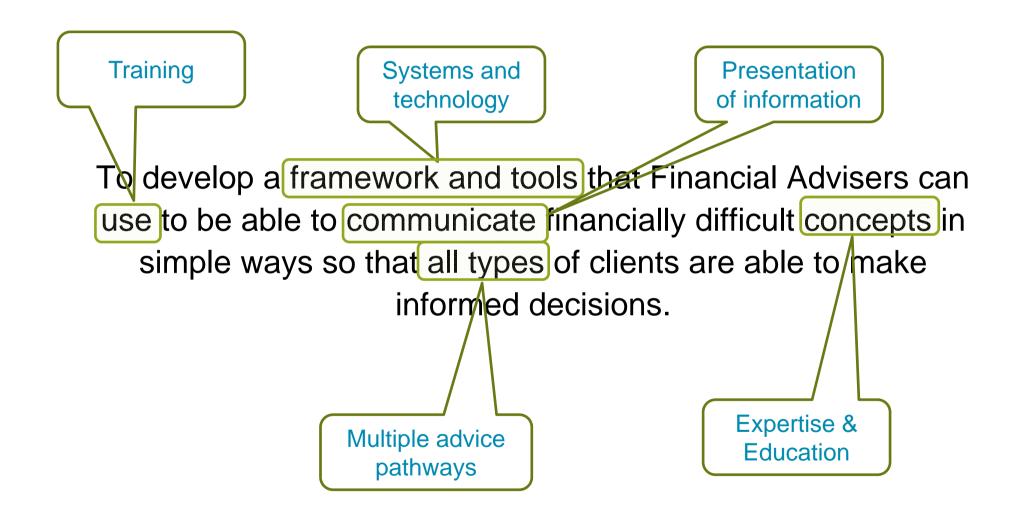

Hyperbolic

Discounting

High discount rate

for future income

The Challenge

Solution Requirements

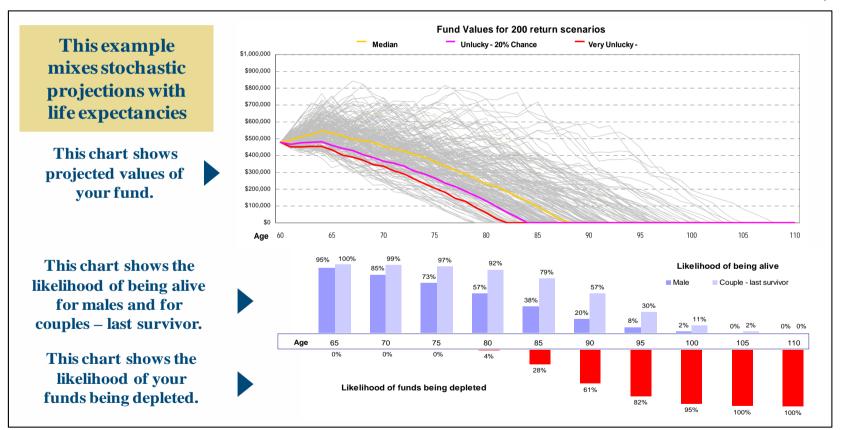

Communication is a MAJOR Hurdle

- Illustrating complex concepts in an easily understandable way
- Use of visual aids and natural language
- How do other professions communicate risk?
 - Medical / doctors
 - Weather forecasters
 - Gambling

Illustration Examples

Illustrative Only

Example Sensitivity Heat Map

- Heat maps enable advisers to provide clear visual examples of the effects of various assumption changes
- Colour schemes can be customised by the adviser to suit the investors risk tolerance
- Communicate risk with colours rather than / in addition to probabilities

Age of 1 st pension withdrawal 61 63 65 67 69 Likelihood of Success 619 75% 85% 93% 96% Income required until age: 86 88 90 92 94 Likelihood of Success 92% 88% 85% 82% 79% Annual Contribution \$5,400 \$7,20 \$9,000 \$10,800 \$12,600 Likelihood of Success 80% 82% 85% 89% 89% Desired Terminal Value \$60,000 \$80,000 \$100,000 \$120,000 \$140,000 Likelihood of Success 88% 87% 85% 85% 84%	tivity Heat Maps

Likelihood of Success 100% 99% 85% 62% 41%							

Illustrative Only

Idealised Illustration Requirements

- "Market referenceable"
 - Returns based upon risk free rate term structure
 - Risk neutral or real world?
 - If real world, then use standardised risk premia assumptions
- Volatility
 - Market consistent or real world
 - Stronger case for real world?
- Correlations? Standardised?

Presentation

- Base case is minimum risk strategy
- Graphical / tabular output, summarised into natural language
- Risks communicated qualitative and quantitatively via impact scenarios
 - How is each being mitigated
 - Expected risk premia associated with bearing residual risks

What Can Go Well?

Standard Life Experience with Client Planner

- Winner of Best Online IFA tool 2008 at Online Finance awards
- Better advice for consumers

"I can now consider phased income drawdown again, which I knew was better for the client but was previously too hard to explain" Adviser A

- Better consumer understanding of their options
- Publicity for Standard Life

"The new At Retirement tool launched a few months ago has had a **significant impact on their overall proposition** and shows the way ahead for such services in future." <u>Money Marketing, E-commerce ratings</u>

- Challenges:
 - Advisor training
 - Scope: complexity vs simplicity tradeoff
 - Assumption setting
 - Ahead of its time?

Mission Statement

To ensure that the financial services industry provides consumers with useful, clear and unbiased financial information and advice, to enable them to effectively manage their wealth in order to achieve their lifetime financial goals

Research	Modelling bases Behavioural finance Communication of concepts Build a body of knowledge	MIG?
Engagement	Public and consumer groups Regulators Financial planners – professionalisation of advice Product providers Investment and pension community	WORKING
Activities	Contribute to advisor education CPD Submissions to policy makers	PARTY?
