# Time Horizon Solved!

## Agenda:

- Context
- Time Horizon
- Questionnaire
- Model
- Conclusions

# Context

- What are we considering?
  - Risk-Based Capital assessment
  - Impact of Time Horizon
  - Underwriting risk only
- What are we **not** considering?
  - Calculation of individual risks
  - Aggregation of risks

# Context

- Capital Assessment
  - Risk Profile (e.g. retained earnings distribution)
  - Risk Measure (e.g. VaR)
  - Risk Tolerance Level (e.g. 99.5%)
- Risk Profile considerations
  - What risks are we trying to capture? [going-concern, run-off]
  - Basis for quantification (e.g. regulatory, cashflow)

# Time Horizon

- No common definition of Time Horizon,
- but, various elements to consider, including:
  - Risk Identification issues
    - ***New Business Period [short/medium/long term risks?]***
    - ***Allowance for run-off costs***
  - Risk Quantification issues
    - ***Projection Period***
    - ***Recognition of run-off costs***

# Time Horizon

- and dependent on purpose of capital assessment:
  - Business planning / strategy
  - Rating agency assessment
  - Regulatory assessment
  - Due diligence
  - Other (e.g. Pricing, RI assessment, Asset allocation)

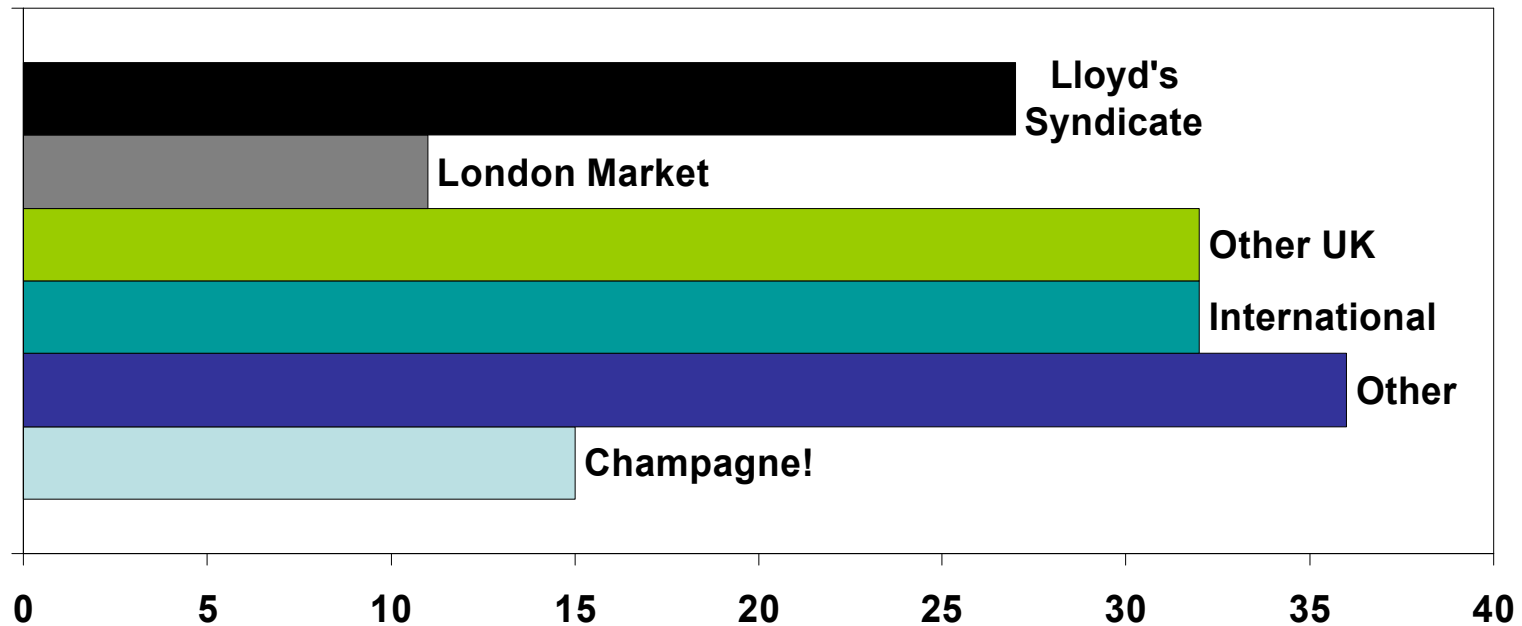

# Questionnaire

## Aims

- Understanding
- Agreement / Divergence
- Inputs for model

# Questionnaire

## Results: Background of respondents

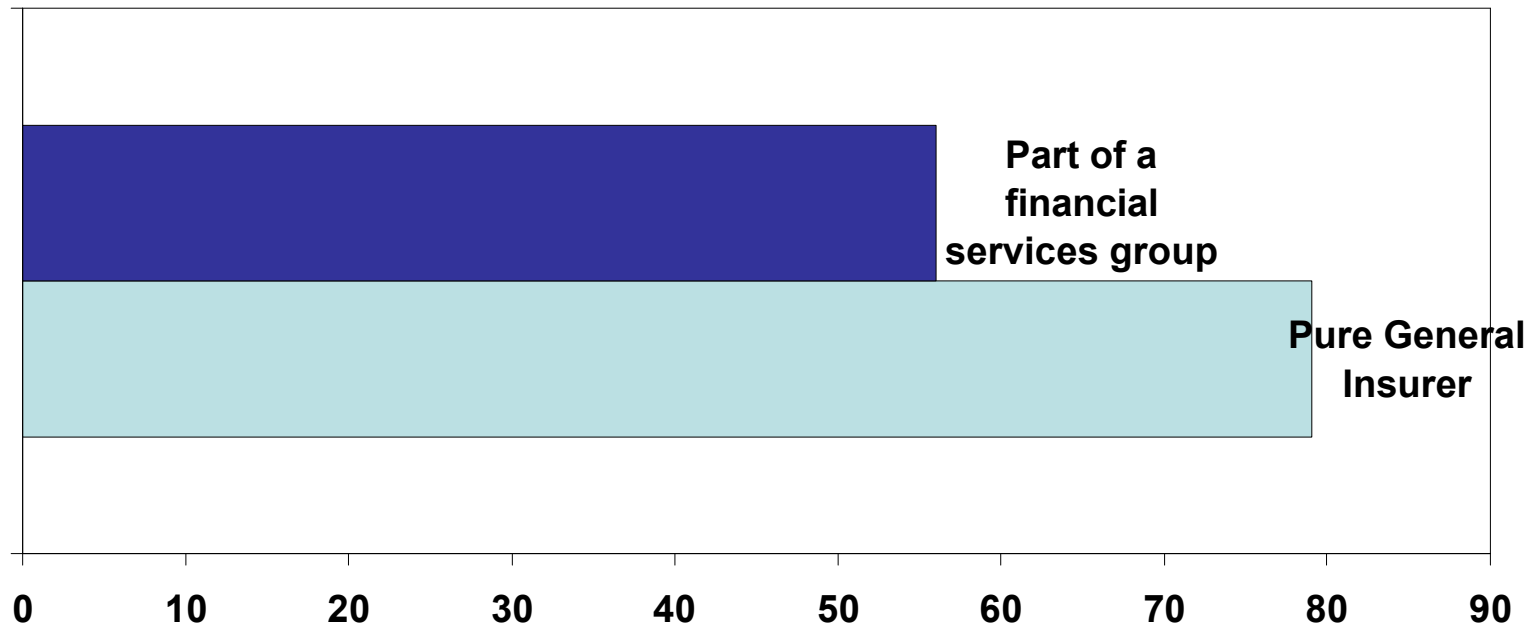

- Total Number of responses: 153

# Questionnaire

## Results: Background of respondents

- Total Number of responses: 153

# Questionnaire

## Results: New Business Period

# Questionnaire Results: Projection Period

# Questionnaire

## Results: Reserve recognition

# Questionnaire

**Results:** What confidence level do you use at the end of the Projection Period?

# Questionnaire

Results: Is your confidence level a function of the:

# Model

## Aim

- Potential impact on capital assessments from:
  - Different views of time horizon
  - Different risk tolerances

# Model Assumptions

- Risk Profile
  - Underwriting risk only / No investment income
  - Going Concern
  - Calculation basis: cashflow
  - 6 worst simulations (cashflows of losses)
  - Cashflows assume Perfect Foresight
  - Recognition assumption 60%, 80%, 90%, 100%
  - New business assumed to increase capital  
(may not always be the case)
- Risk Measure
  - Value at Risk

# Model

## Example Assumptions (1 yr new business)

|   | <b>Total</b> | <b>1</b> | <b>2</b> | <b>3</b> | <b>4</b> | <b>5</b> | <b>6</b> | <b>7</b> | <b>8</b> | <b>9</b> | <b>10</b> |
|---|--------------|----------|----------|----------|----------|----------|----------|----------|----------|----------|-----------|
| 1 | 1,902        | 132      | 185      | 238      | 264      | 291      | 264      | 211      | 158      | 132      | 26        |
| 2 | 1,615        | 112      | 157      | 202      | 224      | 247      | 224      | 179      | 135      | 112      | 22        |
| 3 | 1,447        | 100      | 141      | 181      | 201      | 221      | 201      | 161      | 121      | 100      | 20        |
| 4 | 1,327        | 92       | 129      | 166      | 184      | 203      | 184      | 147      | 111      | 92       | 18        |
| 5 | 1,234        | 86       | 120      | 154      | 171      | 189      | 171      | 137      | 103      | 86       | 17        |
| 6 | 1,158        | 80       | 113      | 145      | 161      | 177      | 161      | 129      | 96       | 80       | 16        |

### Recognition To Ultimate

| <b>1</b> | <b>2</b> | <b>3</b> | <b>4</b> | <b>5</b> |
|----------|----------|----------|----------|----------|
| 60%      | 80%      | 90%      | 100%     | 100%     |

### Expected Ultimate

|   |       |       |       |       |       |       |       |       |       |       |
|---|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| 1 | 1,141 | 1,521 | 1,712 | 1,902 | 1,902 | 1,902 | 1,902 | 1,902 | 1,902 | 1,902 |
| 2 | 969   | 1,292 | 1,453 | 1,615 | 1,615 | 1,615 | 1,615 | 1,615 | 1,615 | 1,615 |
| 3 | 868   | 1,157 | 1,302 | 1,447 | 1,447 | 1,447 | 1,447 | 1,447 | 1,447 | 1,447 |
| 4 | 796   | 1,062 | 1,194 | 1,327 | 1,327 | 1,327 | 1,327 | 1,327 | 1,327 | 1,327 |
| 5 | 740   | 987   | 1,111 | 1,234 | 1,234 | 1,234 | 1,234 | 1,234 | 1,234 | 1,234 |
| 6 | 695   | 926   | 1,042 | 1,158 | 1,158 | 1,158 | 1,158 | 1,158 | 1,158 | 1,158 |

# Model Variables

- Risk Profile (Time Horizon)
  - New Business Period: 1 year, 3 years, 5 years
  - Recognition: Immediate, Develop over time
  - Projection Period: 1 year, 3 years, Complete Run-off
  - Calculation basis: Going concern, run-off
- Risk Tolerances
  - 99.5%, 98.5%, 97.5%, Sloping ( $100\% - t \cdot 0.5\%$ )
- 144 combinations!  
(but significant number discarded)

# Variability of model results to input assumptions

- Capital amount varied from 1,141 to 4,849
- Variables for these extremes were:
  - 1,141: (1 NB, 1PP, CI 99.5%, Recognition over time)
  - 4,849: (5 NB, 5PP, CI 99.5%, Recognition immediately)
- NB: Different assumptions, different results!

# Results from the Questionnaires

# Conclusions

## Time Horizon considerations

- Affects risk profile in numerous ways
  - New Business Period
  - Projection Period
  - Claim Recognition
- Purpose of capital assessment
- Impact on capital assessment can be dramatic

# Conclusions

## Time Horizon solved?

- Solvency 2!

# Further Questionnaire Results

# Questionnaire

## Results: Allowance for claim run-off?

# Questionnaire

## Results: Going concern or run-off?

# Questionnaire

## Results: Allowance for unexpired risks?

# Questionnaire

## Results: Calculation Basis

# Questionnaire

**Results:** Solvency assessed at the end of each Projection Period?

# Questionnaire

**Results:** Which Projection Period produced the highest result?

- “Depends” was a common answer!
  - 1 year if risks considered to ultimate straight away
  - Longer period if no management actions allowed for
  - Depends on profitability of new business assumed
- Overall feedback was limited
  - Roughly 2/3<sup>rds</sup> stated that applying more than 1 projection period produced a higher result

# Questionnaire

## Results: Any other comments

- In practice a variety of approaches are used
- Allowance for the underwriting cycle?
  
- We spelt conundrum incorrectly!
