Momentum Conference 2011
Kate Strevens and Vivienne Maclure

EU Gender Directive
Nine Months On
Manchester 1 December 2011
Agenda

• Background
  – The 2004 EU Gender Directive
  – The Test Achats case and the ECJ judgment
• What Happens Next?
• People’s Survey
• Implications for insurers
• Discussion
Background
Differentiation or Discrimination?

Differentiation
• any process in which a mixture of materials separates out partially or completely into its constituent parts

Discrimination
• unfair treatment of a person, racial group, minority, etc; action based on prejudice
Background
Press coverage, and actuarial implications

What Europe’s ‘bizarre’ women drivers ruling adds up to

- Most press coverage to date focuses on GI initially.
- May be impacted the most!

Directly impacts DC annuity purchase
Much other work currently unaffected...
...but unisex factors etc in due course?

Source: The Telegraph, April 2011
Background

Current UK anti-discrimination legislation

- Historically, UK legislation on:
  - Sex Discrimination (*limited impact on insurers?*)
  - Disability Discrimination (*more careful implementation of existing practices?*)
- EU Gender Directive led to specific amends to Sex Discrimination Regulations (*continuation of existing practices?*)
- Equality Act 2010 (*limited impact on insurers ... so far*)
Background
Equality Act 2010

- Largely consolidates existing UK legislation (Gender, Disability)
- Unlawful to discriminate:
  - Directly (treat a person less favourably because of a protected characteristic) or
  - Indirectly (do something in a way that has a worse impact on people who share a particular protected characteristic)
- 9 protected characteristics:
  - age, disability, gender reassignment, marriage, pregnancy, race, religion, sex and sexual orientation
- Ability to differentiate depends on the characteristic
- Enabling legislation for guidance on Age Discrimination – GEO currently consulting
Background

• Aims to combat discrimination based on gender in access to, and the supply of, goods and services
• Unisex rates required but Member State opt out allowed (unless already using unisex rates)
• Applies to new insurance contracts concluded after 21 December 2007 where these are private, voluntary and separate from the employment relationship
• 5 year review (originally) due at end of 2010 with Member State review of opt-out to follow by 21/12/2012
Background

- Article 5(2) allows Member States to permit differences related to sex in respect of insurance premiums and benefits:
  - Where gender is a *determining* factor in the assessment of risk based on *relevant and accurate* actuarial and statistical data then *proportionate* differences in individual premiums or benefits are allowed
  - Data must be compiled, *published* and regularly updated
Background

Current EU Directive: Use of Opt-out clause

All 26 countries availed of the opt-out clause:

- 13 for all types of insurance (incl. UK)
- 9 countries do not allow gender to be used for motor
- 4 countries do not allow gender to be used for accident
- Several countries allow only for selected classes:
  - Belgium – Life/annuities only
  - Cyprus – Life/annuities/accident only
  - Norway – Life/annuities/disability only

Source: Groupe Consultatif
Background
UK implementation of EU directive

• Implemented April 2008
• Gender allowed as a rating factor for all types of insurance
• Data - individual company level or pooled
• Pricing - proportionate to the data, but says that other factors affect the premium rates
• UK legislation applies to insurance sold to UK residents (whether by UK or overseas insurers) but does not apply to UK insurers selling overseas to non UK residents.
Background

Challenging the legislation

- The “Test-Achats” case
  - Belgium adopted the Opt out for life insurance/annuities only
  - Action brought in June 2008 by Test-Achats that the law is incompatible with the principle of equal treatment
  - Court referred to the European Court of Justice

- The Advocate General’s Opinion – 30 Sept 2010
  - Founding principles override the EU Directive
  - Opt-out is against EU principle of equal treatment
  - 3-year transition period
  - Impacts all future insurance premiums (and benefits?) after 3 years
Background
The ECJ judgment – 1 March 2011

• Conclusion consistent with the Advocate General:
  – “Equality between men and women is a fundamental principle”

• But a significant focus on the lack of a time-limit for the opt-out clause:
  – “There is a risk that EU law may permit the derogation from the equal treatment of men and women, provided for in Article 5(2) of Directive 2004/113, to persist indefinitely.”
  – “such a provision, which enables the Member States in question to maintain without temporal limitation an exemption from the rule of unisex premiums and benefits, works against the achievement of the objective of equal treatment ... and is incompatible with Articles 21 and 23 of the Charter.”
  – “That provision must therefore be considered to be invalid upon the expiry of an appropriate transitional period.”
Background
The ECJ judgment: What we know

- Must use unisex pricing for new policies from 21 December 2012
- HM Treasury – consultation on draft legislation is imminent
- EU Commission – guidance (expected December 2011)
Background
The ECJ judgment: What we don’t know

- Will HMT view prevail?
- Ability to collect gender?
- Application to policies sold before 21 Dec 2007?
- Application to policies sold 21 Dec 2007 to 21 Dec 2012?
- Scope of unisex pricing for new policies:
  - By product (Group?)
  - By jurisdiction
- Will legislation restrict product design/use of proxies/target marketing
- Does decision impact on underwriting of diseases that impact genders differently
- ... and lots more!
What Happens Next?

- **WE DON’T KNOW**
  - If HM Treasury enacts UK legislation, we think:
    - Risk of retrospective application is low (except possibly reviewable/renewable)
    - Risk that legislation will outlaw collecting gender is low
    - Unisex pricing for new policies will be limited to individual policies
    - Unisex pricing will not be *explicitly* defined
    - Legislation will apply to policies sold to UK residents
    - Legislation will not *explicitly* restrict product design/use of proxies/target marketing
    - Legislation will not *explicitly* cover medical underwriting
Agenda

- Background
  - The 2004 EU Gender Directive
  - The Test Achats case and the ECJ judgment
- What Happens Next?
- People’s Survey
- Implications for insurers
- Discussion
People’s survey

To find out from the general public:

• Their awareness of this EU Gender Directive and ruling
• Their reactions
• Their understanding of the ruling
People’s survey results (1)

Background information
• 72 responses – 32 (44%) male, 40 (56%) female
People’s survey results (2)

Products purchased in last year

## Implications for Insurers
### What are the gender differentials?

<table>
<thead>
<tr>
<th>Type of business</th>
<th>Differential</th>
</tr>
</thead>
<tbody>
<tr>
<td>Term Assurance</td>
<td>Male 20%-25% higher than Female</td>
</tr>
<tr>
<td>Critical Illness</td>
<td>• Male / Female very similar at younger ages</td>
</tr>
<tr>
<td></td>
<td>• Male higher than Female from age 45</td>
</tr>
<tr>
<td>Income Protection</td>
<td>• Female 50%-80% higher than Male</td>
</tr>
<tr>
<td></td>
<td>• Except Holloway societies!</td>
</tr>
<tr>
<td>Motor Insurance</td>
<td>Females lower at all ages except 70+</td>
</tr>
<tr>
<td>PMI</td>
<td>Females 60% higher at ages 35-50 but lower at retirement ages</td>
</tr>
</tbody>
</table>
Implications for Life Insurers
Why use gender pricing? Life expectancy

Men: Expectation of life from age 65
Women: Expectation of life from 65

Robert Koch discovers tuberculosis pathogen (1882)
NHS introduced in England & Wales (1948)
BCG vaccine introduced into schools (1950s)

~ 2.5 years difference

Implications for Life Insurers – Annuities
Other (non gender) factors

Health  Lifestyle  Affluence
12.0 years  +1.8  +4.6  +4.0  +0.7

Source: Club Vita
Implications for Life Insurers – Annuities
Reasons for gender differences?

Behavioural differences
• Differences in smoking patterns and lifestyles
• Women more risk averse?

Biological differences
• Longer female life expectancy: to care for young
• Male hormones can have drawbacks, female hormones can be beneficial…
Implications for Life Insurers – Term Assurance
How important is gender?

Approximate scale of key rating factors for Term Assurance

<table>
<thead>
<tr>
<th>Rating factor</th>
<th>Relative importance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gender (Male v Female)</td>
<td>1.3 x</td>
</tr>
<tr>
<td>Smoking status (Smoker v Non-smoker)</td>
<td>2 x</td>
</tr>
<tr>
<td>Age (60 v 30)</td>
<td>10 x</td>
</tr>
</tbody>
</table>
Implications for Life Insurers – Term Assurance
Impact on demand

• Equal premiums based on previous mix
  – Male premium £8.06; Female £6.71 (age 35, term 25, SA £150,000)
  – Previous mix 60% male, 40% female
  – Equalised premium = £7.52 per month
• But...
  – Allow for any skew in our mix v market...
  – ...and consider how varies, e.g. by sum assured...
  – ...and how demand will differ with unisex pricing...
  – ...and include a margin for uncertainty...
  – ...and include costs for implementation...
• and premium may not be much lower than £8.06
• Unlikely to materially affect demand
## Implications for Life Insurers – Term Assurance

### Gender profile

<table>

<td>• Female 50%-80% higher than Male</td>
</tr>
</tbody>
</table>
Implications for Pensions
Direct and Indirect

• Direct impact
  – Future annuity purchase by individuals will be unisex
  – Benefit for males in purchasing annuities before 21 Dec 2012?
  – Trust-based advantage over contract-based for males?
  – Disincentive to pension savings for Males?
  – Few (if any) direct implications for DB schemes

• Indirect impact
  – Unisex transfer values
  – Bulk annuity purchase and selective purchase
  – Legal challenges due to equality drift?
Implications for General Insurers
Current Private Motor Market

- 28m private cars in UK in 2011
- GWP £9.5bn in 2009
- Over 60 insurers
- Top 10 insurer – 77% market share
- Top 5 insurer – 55% market share

- 37m full licence holder in UK in July 2011
  – 45% female and 55% male
## Implications for General Insurers

How important is gender?

Implications
The Transition Period

• New Business from 21 Dec 2012 .... but when will we know the new legislation?
• Substantial systems impact
  – Lower if can collect gender in application process
• Early or late adopter?
• Prioritisation of changes by product
• Need to allow for retrospection (if applicable)
• Need to allow for anti-selection
• IFAs may target one gender (“Buy now while stocks last”)
Implications
How to switch new business terms

• Approach to unisex pricing
  – Assumed gender mix
  – Allowance for business mix risk
  – What constitutes a new contract

• Unisex underwriting
  – Revise questions
  – Review ratings

• Reinsurance terms
Implications
When to switch

- Big bang or phased?
- Gradual or step change?
- Lapse risk
- Other things happening in December 2012
- How to manage quote guarantee periods?
- How to manage pipeline?
- Christmas holidays
- …depends on the rest of the market
Implications
Potential consequences

• Initial market volatility
• Redistribution impact
• Competition will establish new level
• Rebroking opportunity
• Change in buying patterns
• New product design
• Introduction of new rating factors
• New commission strategies
• Higher loadings
Implications
The next battlefield?

• “The aim of this proposal is to implement the principle of equal treatment between persons irrespective of religion or belief, disability, age or sexual orientation outside the labour market.”

• “This proposal builds upon Directives … 2004/113/EC”

• “Actuarial and risk factors related to disability and to age are used in the provision of insurance, banking and other financial services. These should not be regarded as constituting discrimination where the factors are shown to be key factors for the assessment of risk.”
“Cette victoire se situe dans la droite ligne de la position de Test-Achats émise dès 1995 visant à interdire de faire varier les primes en fonction de facteurs que le consommateur ne maîtrise pas, comme l’âge en assurance auto, le sexe, l’état de santé… ”

Test-Achats website 1 March 2011
The final word.... From our people’s survey participants!

“The law is an a**! The next logical step from this will be to say age shouldn't be used for statistical purposes because it's "ageist". That's clearly nonsensical too.”

“I think that treating everyone equally is a good thing - but I suspect that the insurance companies will use it as an excuse to raise their premiums regardless of the different gender risks.”

“Insurance is all about the statistical likeliness that a client will make a claim - which is affected by everything including gender.”

“The ECJ ruling sucks and makes me hate the ECJ even more.”
Expressions of individual views by members of The Actuarial Profession and its staff are encouraged.

The views expressed in this presentation were those of at least one of the presenters when the slides were written last week and are not those of our employers.

The presenters are actuaries – not lawyers! – and do not accept any liability for the content of these slides.
