---

**Typical approach taken to valuing a business**

- Multiple of EBITDA (depends on future prospects of business)
- Reduce valuation by any net debt
- Pension scheme deficits (and unfunded liabilities) are now generally regarded as being another form of corporate debt
- Treat past service and future service separately:
  - Transferring deficits/unfunded liabilities increase net debt
  - Allow only for cost of future service in EBITDA

---

## Market trends in recent years

- The pensions environment has become ever less employer friendly
- Solvent companies cannot default on pension obligations
- In the event of insolvency, pension debts might pierce the veil of limited liability

3

---

---

---

---

---

---

---

---

---

---

## Market trends in recent years

- In recent years, increasing focus on accounting bases such as FRS17 and IAS19 as a starting point
- Then consider:
  - size and maturity of scheme
  - Power of the Trustees and lifetime of the business
- Other approaches remain possible e.g. rail franchises

---

---

---

## Impact on pricing of different bases

Choice of valuation methodology has a significant impact

---

---

## Other economic and demographic assumptions

### Mortality

- Trend towards increasing prudence in mortality tables
- Whilst no (or short) cohort typical practice now, what about at exit in the future (for a PE house) or in future financial reporting (for a corporate)?

### Commutation

- Reasonableness of factors and assumption

### Withdrawal/salary scale

Are the assumptions reasonable when looking at the transferring pension scheme members?

6

---

---

---

---

---

---

---

---

---

---

---

---

## Other economic and demographic assumptions

### Early retirements

- Is there adequate allowance for early retirements?

### Other

- Price inflation
- General salary inflation
- Pension increases
- Redundancy costs

## A note about FRS17

- FRS17 is not a fixed measure
- 'Flexibility' within FRS17 – negotiation point
- Accounts often on optimistic side of permitted range

Example			
	Targets Last Accounts	Updated for market changes	"Middle of the Road" FRS17 Basis
Assets	£25m	£28m	£28m
Liabilities	£27m	£35m	£37m
Deficit	£2m	£7m	£9m
Service cost	£1.5m	£2.2m	£2.3m
Service increase			£0.8m

---

---

---

---

---

---

---

---

---

---

---

---

## Choice of valuation methodology

What is the correct methodology for calculating deficit and service cost?

It depends.....

9

---

---

---

---

---

---

---

---

---

---

## What is an appropriate valuation approach?

### Example 1

- Company valuation £1bn (before adjustment for pensions)
- Pension scheme assets £100m
- Pension scheme liabilities (IAS19) £120m
- Closed to new entrants, open to new accrual
- Trustees do not have power to unilaterally wind up or set contribution rate
- What would your recommendation for pricing basis be?

10

---

---

---

---

---

---

---

---

---

---

## What is an appropriate valuation approach?

### Example 2

- Company valuation £200m (before adjustment for pensions)
- Pension scheme assets £50m
- Pension scheme liabilities (IAS19) £70m
- Highly leveraged buyout
- Closed to new entrants, closed to new accrual
- Trustees do not have power to unilaterally wind up but do set the contribution rate
- What would your recommendation for pricing basis be?

11

---

---

---

---

---

---

---

---

---

---

## What is an appropriate valuation approach?

### Example 3

- Company valuation £100m (before adjustment for pensions)
- Company is a railway franchise. At the end of the franchise the Railways Pension Scheme section is passed on to the next franchise holder
- Pension scheme assets £200m, liabilities (FRS17) £250m
- Closed to new entrants, open to new accrual
- Trustees do not have power to unilaterally wind up but do set contribution rate
- What would your recommendation for pricing basis be?

12

---

---

---

---

---

---

---

---

---

---

## What is an appropriate valuation approach?

### Example 4

- Company valuation £20m (before adjustment for pensions)
- Pension scheme assets £30m, liabilities (FRS17) £55m
- Closed to new entrants and new accrual
- Trustees do not have power to unilaterally wind up or to set contribution rate
- How would you price this

---

---

---

---

---

---

---

---

---

## The Regulator

- Pensions Regulator was introduced with effect from April 2005
- Statutory objectives:

Protect members' benefits

Minimise claims on PPF

Promote better scheme administration

- Extensive powers, including:
  - moral hazard clauses
  - ability to set scheme specific funding levels

© 2005 KPMG LLP, a US limited liability partnership and the US member firm of KPMG International, a Swiss entity. All rights reserved.

14

---

---

---

---

---

---

---

---

---

---

## Contribution Notices

- The Regulator can impose a liability to make a payment in respect of an act or omission which,
  - in the opinion of the Regulator,
  - had as its main purpose, or one of its main purposes,
  - prevention of recovery of a pension deficit
  - or prevention of a debt falling due
- Examples include:

© 2005 KPMG LLP, a UK limited liability partnership and the UK member firm of KPMG International, a Swiss entity. All rights reserved.

15

---

---

---

---

---

---

---

---

---

---

## Contribution Notices

- Applies to the employing company
  - or any associated or connected party
  - who is a party to the act or omission
- In deciding whether to issue a notice the Regulator must:
  - consider a number of factors i.e. the motivation of the act
  - be satisfied it is reasonable to do so
- Provisions are retrospective i.e. from 27 April 2004
- 6 year time limit

© 2005 KPMG LLP, a UK limited liability partnership and the UK member firm of KPMG International, a Swiss entity. All rights reserved.

16

---

---

---

---

---

---

---

---

---

---

## Financial Support Directions

- Connected or associated parties can be required to put financial support arrangements in place

Give guarantee

Accept joint and several liability

Put cash into scheme

- Definition of 'associated' wide and onerous – individuals excluded
- An FSD can be issued where the employer is:
  - a service company, or
  - is insufficiently resourced
- Period of 9 months after ceasing to be associated or connected

© 2005 KPMG LLP, a UK limited liability partnership and the UK member firm of KPMG International, a Swiss entity. All rights reserved.

17

---

---

---

---

---

---

---

---

---

---

## Clearance

- Parties can apply for advance assurance that a particular event will not lead to action from the Regulator i.e. a CN or FSD
  - Clearance can be withdrawn if circumstances change
- The Regulator only expects clearance to be sought for specified events which:
  - impact on the pensions creditor
  - financially detrimental
- Regulator expects Trustees to be involved in the process and to take independent advice
  - likely to require additional funding or other guarantees

18

---

---

---

---

---

---

---

---

---

---

## Clearance

Trustees will act as unsecured creditor and negotiate with the sponsoring company

---

---

---

---

---

---

---

---

---

## Clearance solutions – case studies

### Project A

- Remove £20m of the £40m FRS17 deficit immediately
- Pay-off remainder over 5 years
- Retain some equity exposure, but close it off to the extent that out-performance is achieved

### Project B

- As Project A, however FRS17 deficit paid off over 10 years, but equivalent to paying off an equity basis deficit over 5 years

### Project C

- No deterioration in the position of the pension scheme – Clearance given without additional funding/security

### Project C

- Remove half of the scheme through transfers (at below FRS17 cost)
- Pay-off the residual FRS17 deficit immediately
