

# Socio-Economic Differences in Mortality by Cause of Death

Andrew J.G. Cairns

Heriot-Watt University, Edinburgh

Director, Actuarial Research Centre, IFoA

Joint work with C. Redondo, D. Blake, K. Dowd, M. Kallestrup-Lamb, C. Rosenskjold, A.S. Macdonald

ARC Workshop, April 2018

# Outline

- Danish data by:
  - affluence
  - education
- US by education group
- Comparison: Denmark vs US
- English data: early stages

# Purpose of looking at cause of death data

- What are the key drivers of all-cause mortality?
- How are the key drivers changing over time?
- Which causes of death have high levels of inequality?
- Can we point to specific causes of death as responsible for *growing inequality*?
- Beware of
  - changes in ICD classification of deaths (1998-99)
  - drift in how deaths are classified
  - changing education levels (grade inflation)
- Insight into mortality underpinning life insurance and pensions

- Statistics Denmark National Register Database
- Key data (amongst others) for each individual:
  - Date of birth ( $\Rightarrow$  age)
  - Date of death
  - Wealth
  - Income
  - $\text{Affluence} = \text{Wealth} + 15 \times \text{Income}$
  - Education
  - Cause of Death

# Education and Affluence Levels

## Education (Denmark)

---

Low education	Primary and lower secondary education
Medium education	Upper secondary education
High education	Tertiary education

---

(No education data for cohorts born before 1922.)

## Affluence

---

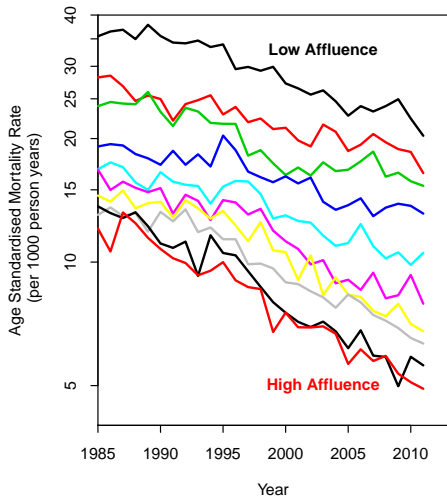

Level 1	Low affluence <i>decile</i>
⋮	⋮
Level 10	High affluence <i>decile</i>

---

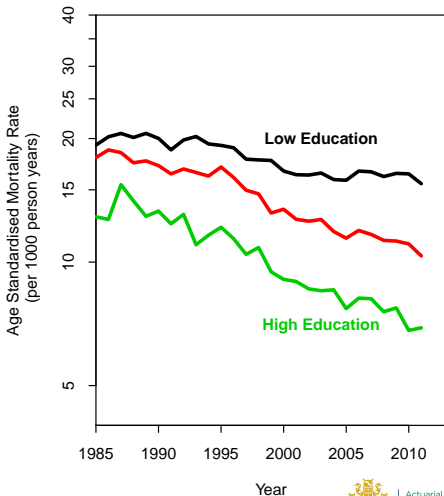

# Age Standardised Death Rates, Age Group 55-64

Age Standardised Mortality Rates per 1000  
Ages 55-64 by Affluence

Age Standardised Mortality Rates per 1000  
Ages 55-64 by Education

## Cause of Death Data – Health Inequalities

- Deaths subdivided into 29 CoD groups
- Age groups 31-35, 36-40, ..., 91-95
- Year groups 1985-89, 1990-94, 1995-99, 2000-2004, 2005-2009
- Compare affluence groups
- Compare education groups

# Cause of Death Data – Health Inequalities

---

1	Infectious diseases incl. tuberculosis	2	Cancer: mouth, gullet, stomach
3	Cancer: gut, rectum	4	Cancer: lung, larynx, ..
5	Cancer: breast	6	Cancer: uterus, cervix
7	Cancer: prostate, testicular	8	Cancer: bones, skin
9	Cancer: lymphatic, blood-forming tissue	10	Benign tumours
11	Diseases: blood	12	Diabetes
13	Mental illness	14	Meningitis + nervous system (Alzh.)
15	Blood pressure + rheumatic fever	16	Ischaemic heart diseases
17	Other heart diseases	18	Diseases: cerebrovascular
19	Diseases: circulatory	20	Diseases: lungs, breathing
21	Diseases: digestive	22	Diseases: urine, kidney,...
23	Diseases: skin, bone, tissue	24	Senility without mental illness
25	Road/other accidents	26	Other causes
27	Alcohol → liver disease	28	Suicide
29	Accidental Poisonings		

---

# Denmark – Affluence – Top 10 CoD

Ages 71-75; Years 2005-2009

Rank	Least Affluent	Most Affluent
1	Ischaemic heart	Skin/bone cancer
2	Respiratory	Ischaemic heart
3	Lung cancer etc.	Prostate cancer
4	Skin/bone cancer	Respiratory
5	Other	Lung cancer etc.
6	Cerebrovascular	Cerebrovascular
7	Other heart	Other
8	Diabetes	Gut cancer
9	Gut cancer	Other heart
10	Prostate cancer	Alzheimers etc.

Prostate: almost no inequality

# Denmark: Cause of Death Data 2005-2009

High levels of mortality inequality

# Denmark: Cause of Death Data 2005-2009

Affluence  $\Rightarrow$  much wider

# Denmark: Cause of Death Data 2005-2009

Very large differences in middle ages.

- Many causes of death have known risk factors or drivers  
e.g. smoking, diet, healthy lifestyle etc.  
⇒ clear socio-economic differences
- Biggest differences at ages  $< 60$
- Affluence ⇒ stronger predictor than education (sometimes very much stronger)
- Other diseases do not have strong differences:

# Denmark: Cause of Death Data 2005-2009

# Denmark: Cause of Death Data – Health Inequalities

- Some causes of death have **no obvious link** to lifestyle/affluence/education  
e.g. Prostate Cancer  
CancerUK: *Prostate cancer is not clearly linked to any **preventable** risk factors.*  
*Possible **unavoidable** risk factors: genetic; race*
- But Affluence  $\Rightarrow$  inequalities
- Possible explanations (a very non-expert view)
  - *onset* is not dependent on lifestyle/affluence/education
  - BUT less affluent/educated  $\Rightarrow$ 
    - ??? later diagnosis
    - ??? engage less well with treatment process
    - ??? unhelpful environment
    - ??? genetic/racial

## Data sources:

- Human Mortality Database (aggregate exposures)
- CDC individual deaths records
- Current Population Survey (CPS)  
⇒ population education levels

- Males and Females (2)
- Single ages 40-89 (50)
- Single years 1989-2015 (27)
- Causes of death (30) (Danish 29 + HIV/AIDS)
- Low ( $\leq$  high school) & high ( $\geq$  some college) education level (2)

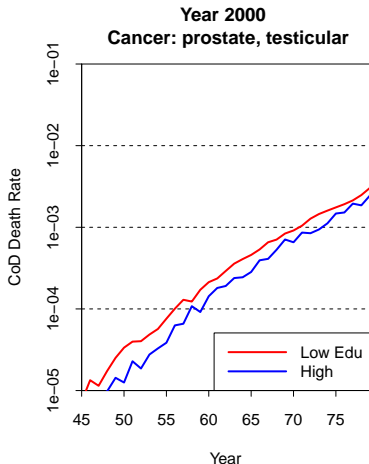

Note 1: further separation of high into (a)  $<$  bachelors degree and (b)  $\geq$  bachelors degree was found to be unreliable.

Note 2: HMD's Human Cause of Death Database  $\Rightarrow$

All ages (5's), 1999-2013 BUT no education subdivision

# US Education Data: 2000 and 2015

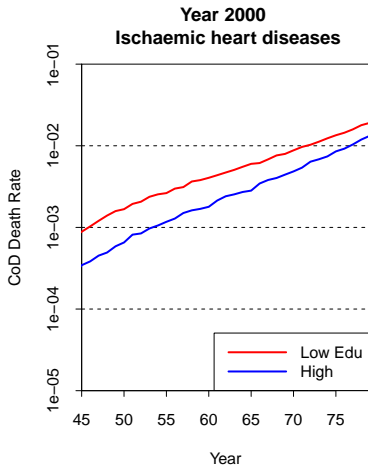

Note 1: some improvements above age 60

Note 2: widening gap

Recall: Denmark  $\Rightarrow$  very narrow gap

US wider gap: health insurance inequalities; genetic/racial

# US Education Data: Males Age 55 – Top Causes

Improvements  
Widening gap

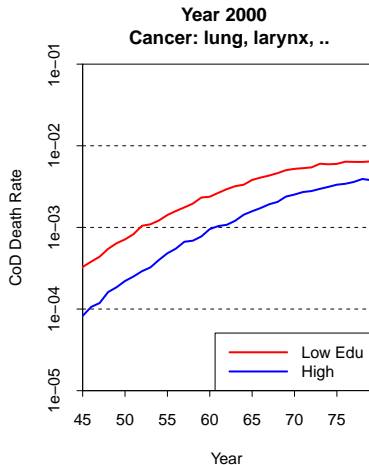

# US Education Data

Widening gap  
Some worsening, some improving

# US Education Data

Widening gap, some improvements

Improvements possibly linked to smoking prevalence

# US Education Data

Widening gap  
Modest improvements

# US Education Data

Case & Deaton (2015) ⇒ Deaths of Despair ↗

# US Education Data

Widening gap  
Modest improvements for high education

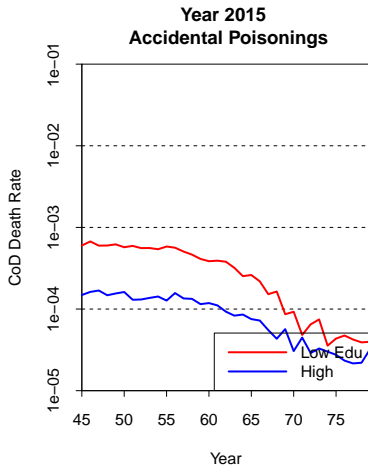

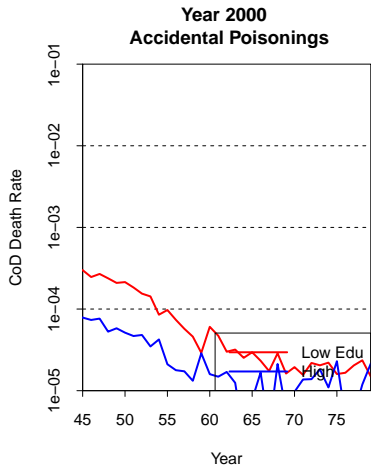

# US Education Data

Mixed picture

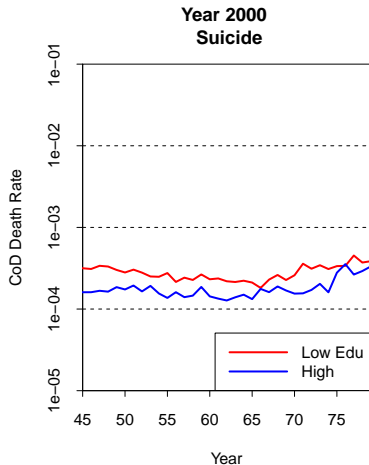

# US Education Data

Case & Deaton (2015)  $\Rightarrow$  Deaths of Despair  $\nearrow$  Year

# US Education Data

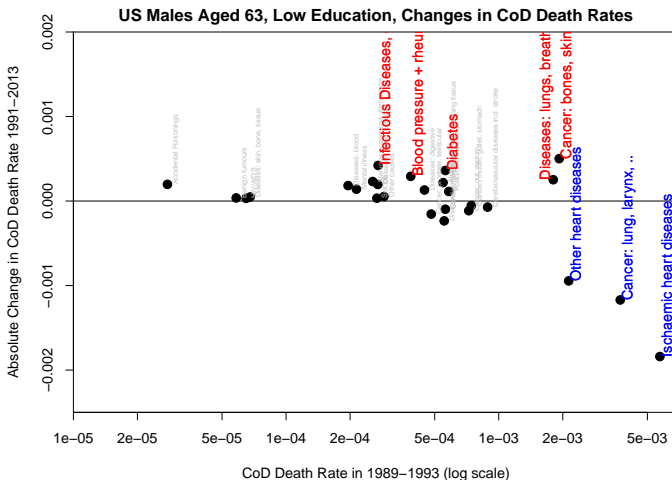

Case & Deaton (2015)  $\Rightarrow$  Deaths of Despair  $\nearrow$

# US Drivers of Change 1991-2013, Males Age 63

# US Drivers of Change 1991-2013, Males Age 63

- Big gains in three causes
- Offset by modest deterioration in many causes

# US Drivers of Change 1991-2013, Males Age 63

# US versus Denmark, Males Age 63 / 61-65

- US: wider inequality gap
- But can't point to one or two big drivers

# US versus Denmark, Males Age 63 / 61-65

## Males, Age 63, Ischaemic heart diseases

# US versus Denmark, Males Age 63 / 61-65

Denmark not impacted by IMD change???

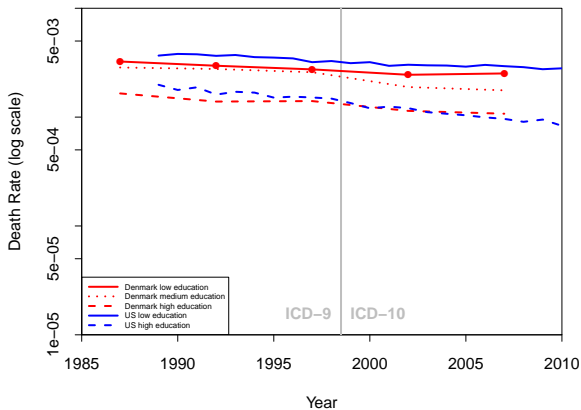

# US versus Denmark, Males Age 63 / 61-65

## Males, Age 63, Cancer: bones, skin

# US versus Denmark, Males Age 63 / 61-65

Males, Age 63, Cancer: lung, larynx, ..

# US versus Denmark, Males Age 63 / 61-65

## Males, Age 63, Diseases: lungs, breathing

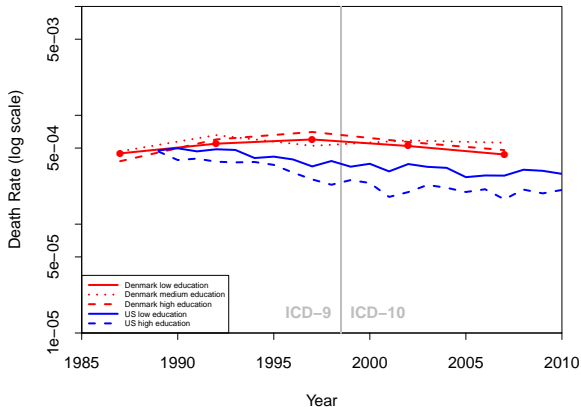

# US versus Denmark, Males Age 63 / 61-65

## Males, Age 63, Diabetes

# US versus Denmark, Males Age 63 / 61-65

Males, Age 63, Cancer: prostate, testicular

- Wider US gap: access to healthcare post-diagnosis + genetic/racial???
  - No preventable risk factors, but Denmark much higher???
- Potentially genetic/racial???

## Further remarks

- Need to factor in changing levels of educational attainment
- Can we link smoking prevalence to e.g. lung cancer mortality?
- Working on obtaining English data by socio-economic  $\times$  geographic groups and cause of death
- Built from small geographical areas rather than individual records.

# Summary

- Affluence better than education for all CoD if you have the data
- Impact of affluence/education varies with CoD
- Significant levels of inequality for most of the big CoD's
- Impact of education varies between countries (e.g. different health systems)
- Work in progress!

Actuarial  
Research Centre

Institute and Faculty  
of Actuaries

# The Actuarial Research Centre (ARC)

A gateway to global actuarial research

The Actuarial Research Centre (ARC) is the Institute and Faculty of Actuaries' (IFoA) network of actuarial researchers around the world. The ARC seeks to deliver cutting-edge research programmes that address some of the significant, global challenges in actuarial science, through a partnership of the actuarial profession, the academic community and practitioners.

The '**Modelling, Measurement and Management of Longevity and Morbidity Risk**' research programme is being funded by the ARC, the SoA and the CIA.
