Climate Change is a financial risk: Are you keeping up, or quietly increasing your professional liability?

Mike Clark

Today’s Agenda

• A question
• The policy and regulatory landscape: the UK and beyond
• The special case of climate change
• New DWP consultation on trustees’ investment duties
• What are pension funds doing?
• How should we think about this?
IFoA issued a Risk Alert on climate-related risks last year

*How would you describe your level of engagement with it?*

**A:** What Risk Alert?

**B:** I think a colleague may have mentioned it to me, but I’ve not taken any further action.

**C:** I’ve read the Risk Alert, and have a sense of what it says.

**D:** Prompted by the Risk Alert, I have integrated climate risk into some of my professional work.

**E:** No need for the Risk Alert – I was already doing that!

DWP Investment Regulations: Consultation

*Trustees to set out their policy (in SIP)*...

- ...in relation to financially material considerations including...those arising from ESG considerations, including climate change
- ...in relation to the stewardship of the investments, including engagement with investee firms and the exercise of voting rights associated with the investment

And for DC schemes, Trustees to:

- prepare or update their default strategy to set out how they take account of financially material considerations, including those arising from ESG risks, including climate change

And then: Produce an implementation report setting out how they acted on the principles in the SIP

What about Europe?

ARTICLE 173

EUROPEAN COMMISSION
Action Plan: Financing Sustainable Growth

Legislative proposals:
• Taxonomy
• Investor Duties/Disclosures: Fiduciary Duty
• Low carbon benchmarks
• Sustainability: advice/products

Regulators in Switzerland and California
Assessing financial organisations’ alignment with Paris goals

Take Goal e.g. 2 Degrees
Apply scenario e.g. IEA
Apply to companies
Evaluate portfolio
Initiatives, Initiatives, Initiatives

So what are pension schemes doing?

• Developing their investment beliefs, and investment strategy
• Reducing carbon exposure risk
  – HSBC, NEST
• Increasing focus on renewables, green bonds
• Devoting more resources to ownership activities
  – Ownership policy: voting, engagement, collective engagement
  – Monitoring of investment manager reporting on exercise of ownership
  – Pre-announcing voting intentions
• Public policy engagement
Environment Agency Pension Fund  
A policy exemplar

- ...the objective is to ensure that our Fund’s investment portfolio and processes are compatible with keeping the global average temperature increase to remain below 2°C relative to pre-industrial levels...

- We have set ourselves three targets for 2020:
  - Invest 15% of the fund in low carbon, energy efficient and other climate mitigation opportunities.
  - Decarbonise the equity portfolio, reducing our exposure to “future emissions” by 90% for coal and 50% for oil and gas by 2020…as at 31 March 2015.
  - Support progress towards an orderly transition to a low carbon economy through actively working with asset owners, fund managers, companies, academia, policy makers and others

So what issues *should* investors consider?

Two ways of thinking about the world

*Is value the same as price?*

**Finance Theory Metrics/Models**
- beta, alpha
- Expected return, standard deviation, covariance
- Efficient Markets Hypothesis
- CAPM (Capital Asset Pricing Model)
- Tracking Error
Modern Portfolio Theory v2.0?

Summary

- Climate change, a specific ESG/sustainability issue, is now mainstream
- Regulators and policymakers are moving forward
- Pension funds and other asset owners are growing their capabilities and developing their practice
- Greater focus on the SDGs is coming
- Do we need to evolve our thinking?
- Might you view the Risk Alert any differently tomorrow?
Expressions of individual views by members of the Institute and Faculty of Actuaries and its staff are encouraged.
